

COLES COUNTY PLANNING & DEVELOPMENT COMMITTEE
HEARING ON COLES WIND, LLC'S, APPLICATION TO CONSTRUCT
AND OPERATE A COMMERCIAL WIND ENERGY FACILITY
(WIND FARM) UPON CERTAIN PROPERTIES IN COLES COUNTY

May 19, 2025
6:00 p.m. - 9:06 p.m.

Hearing Facilitator:
Scott Kains

Counsel for Coles County:
Andrew Keyt
Alex Rives

Counsel for the Applicant:
Amy Antonioli
Jerald Hess
Sarah Lode

Also Appearing for the Applicant:
Brie Anderson
Alan Moore

County Board Members:
Bob Bennett
Mike Clayton
Darrell Cox
David Johnson
Tom Royal
Rick Shook
Michael Watts, Chairman
Bristole Zimmerman

Coles County Regional Planning:
Kelly Lockhart, Executive Director

Lydia G. Madlem, CSR, RPR
IL License No. 084.004988
Official Court Reporter
Coles County Courthouse
Charleston, IL 61920

NUMBER	PAGE
Rogers Exhibit A	40
Yoder Group Exhibit A	40

1 MR. WATTS: Good evening, I am here to
2 reconvene the Coles County Planning and Development
3 Committee's license hearing for the Apex Wind Energy
4 Project in Coles County. And if you would all please
5 rise to say the Pledge of Allegiance.

6 (Pledge of Allegiance.)

7 MR. WATTS: For the roll call:

8 Mike Clayton?

9 MR. CLAYTON: Here.

10 MR. WATTS: Darrell Cox?

11 MR. COX: Here.

12 MR. WATTS: Jeremy Doughty?

13 Tad Freezeland?

14 And I'm Michael Watts, Chairman presiding.

15 And I'll now hand the proceedings over to Mr. Kains.

16 MR. KAINS: Thank you, Mr. Chairman.

17 Is this on, Kent?

18 SOUND TECHNICIAN: (Nods head.)

19 MR. KAINS: Thank you. Well, good evening.

20 When last we met on April 24th of this year, we were in
21 public testimony. And my notes indicate that there had
22 been two gentlemen who were unable to be here that night
23 who wish to testify in support of the application, a
24 Richard Wandling -- Mr. Wandling, are you here -- and

1 also an Andrew McNitt -- Mr. McNitt?

2 All right, I can see you're standing, Mr. Hess.

3 MR. HESS: Yes, sir. Mr. Kains, good evening.

4 Mr. Kains, since the last hearing, we spoke
5 with both of those individuals, and in the interest of
6 time, they're willing to wait until public comment.

7 MR. KAINS: Public comment? All right, very
8 good, thank you. I guess I should've looked up from my
9 notes sooner then I wouldn't have had to call their
10 names.

11 All right, I have one other notation in my
12 file that a Kelly Clark, who is opposed to the project,
13 is not going to be here tonight, but I agreed to allow
14 her to testify tomorrow night.

15 All right, we are in the middle of public
16 testimony -- folks who are opposed to the project.
17 We've already heard from Mr. Nathaniel Phipps and
18 Mr. Jim Allen on April 24th.

19 Let's see, show of hands, who wishes to give
20 public testimony in opposition?

21 (Hands raised.)

22 MR. KAINS: Okay, Mr. Cronkhite. Is that
23 Ms. -- is it Ms. Rogers?

24 MS. ROGERS: Yes.

1 MR. KAINS: Okay. Very good. Mr. Smith --

2 MR. SMITH: Yep.

3 MR. KAINS: -- is it?

4 MR. SMITH: Yes.

5 MR. KAINS: Mr. Yoder. And can't believe I've
6 forgotten your name.

7 MR. SHERMAN: Sherman.

8 MR. KAINS: Mr. Sherman, yes. Boy, I've spent
9 too much time in Livingston County the last couple of
10 weeks, and I've forgotten my friends and faces here.

11 Okay, all right. Then, we will start with
12 Ms. Rogers, if that's all right. Would you like to
13 begin?

14 MS. ROGERS: Well, I suppose.

15 (Pause.)

16 MR. KAINS: We'd like for you to come up and
17 take the witness stand, please.

18 (Witness sworn.)

19 MR. KAINS: Very good, thank you. Have a
20 seat. If you could, please, state your name for the
21 record.

22 MS. ROGERS: My name is Rita Rogers.

23 MR. KAINS: And could you spell your first and
24 last name for the court reporter?

1 MS. ROGERS: Rita, R-i-t-a, Rogers,
2 R-o-g-e-r-s.

3 MR. KAINS: Okay, very good, Ms. Rogers, thank
4 you. And what town do you live in?

5 MS. ROGERS: I live in Edgar County, Illinois,
6 Metcalf.

7 MR. KAINS: Metcalf? All right, you have
8 15 minutes for your testimony and you may begin.

9 RITA ROGERS,
10 called as a witness, being first duly sworn,
11 was examined and testified as follows:

12 TESTIMONY

13 MS. ROGERS: All right. So, my interest is
14 both as a farm wife, landowner, not in this county but
15 someone who cares about the land use in Illinois, good
16 farm ground, and also as a long-term ICU nurse. I have
17 been a nurse for 19 years, 15 years of that spent in the
18 cardiovascular ICU.

19 I'm primarily addressing the landowners who
20 intend to put these on their property, I see which
21 are -- many of them aren't here tonight. It was said
22 that sometimes having the last word is a good thing, and
23 sometimes that is, but I find in this day and age when
24 people have a hard time listening and a short attention

1 span, a lot of the times, the first word is the best
2 because you can see this room is much less packed than
3 it was the first meeting.

4 Also, addressing the board members here, I
5 don't think all of them are here tonight, but I hope you
6 can pass along what is said tonight by the concerned
7 citizens to the other board members.

8 I appreciate you, sir, who has been asking
9 questions. I see most people haven't been asking
10 questions from the board.

11 MR. SHOOK: Thank you.

12 MS. ROGERS: Yes. So, one thing I want to
13 address is some of the board members believe that they
14 can individually be sued, I think, by the State of
15 Illinois based on the decision you make. That is not
16 true. That is not true at all. And I think that, also,
17 based on the legislation put down by Pritzker that
18 basically did away with the state -- or with the county
19 ordinances that were set in place -- my county had great
20 ordinances with great setbacks for homeowners. Those
21 were done away with based on the legislations put forth
22 by -- put forth and signed into legislation by Governor
23 Pritzker.

24 I do not believe you can be sued. If you look

1 at -- or I do not know if the State would sue you -- if
2 you -- you look at what happened in Vermilion County,
3 Illinois, with the abortion pill ban, there were threats
4 of being sued based on the county standing up to that,
5 and they were not. That was all a bluff to get them
6 scared to not standing up.

7 These contracts are all signed by the
8 landowner prior to anyone in the public knowing about
9 it. These people go in and speak to the landowners
10 privately years in advance. We had solar contracts in
11 Edgar County that were signed in 2017 and no application
12 has been filed. So, for eight years, people have been
13 building homes in the areas that they no have idea solar
14 could be coming in. So, it is on you as a county board
15 to have a backbone and to stand up for the citizens, not
16 for just the few citizens that have signed up for the
17 project and for this wind company that's putting them
18 in.

19 All right, three main reasons that I am
20 opposed: There's a health safety risk with -- and there
21 is a lie of what wind and solar are, and just the
22 landscape in general and what it does.

23 So, let's start with the lie a little bit.

24 Mr. Moore, I believe, is that correct? The first

1 night -- I can't go back and look at the transcript of
2 what was actually said because those are not available
3 online yet. I'm not sure why they're not available, but
4 they're not. The first night, they are not available.
5 But I asked him if there's anything to be gained by wind
6 coming into this community. (Laughs.) And you're on
7 the Wind Committee, like you're part of this project.
8 And the only thing you had to offer me was money. You
9 didn't even say that they are good for the environment,
10 like you couldn't even offer that up.

11 So, what has been talked about primarily is
12 money when it comes to the benefit to Coles County of
13 wind coming in. So, the benefit would be money, tax
14 money, money for the schools. And when we talked last
15 weekend -- or Mr. Litteken came up and spoke about the
16 school and the benefit to the school district, talked
17 about 1.6 million, I believe, coming into the school
18 district every year, I just want you to know that
19 currently Charleston School District spent \$16,000 --
20 over \$16,000 per student. And if you look at the
21 statistics, they have 34 percent of students proficient
22 in reading. 34 percent.

23 MR. HESS: Ms. Rogers, I'm -- I'm sorry to
24 interrupt. I just -- respectfully, I would object for

1 the record. None of this, first of all, is in the
2 record, right? So, whatever statistics she's referring
3 to now -- I have the Charleston County School District
4 budget for last year, and if that's what she's relying
5 on, I mean, I think the 40 million number is correct. I
6 just want to make sure the record is clear where she's
7 getting these statistics from.

8 MS. ROGERS: I'll tell you where I'm getting
9 them from.

10 MR. HESS: If -- if I can --

11 MR. KAINS: Just a second.

12 MR. HESS: -- finish, I'm -- I'm sorry for
13 interrupting, Ms. Rogers --

14 MS. ROGERS: Okay.

15 MR. HESS: -- but just to state for the
16 record, if -- if we're allowed to talk about the school
17 district budget, then I will just -- I want the record
18 to be clear, then, as long as I'm allowed to cross based
19 on this budget, I have no objection. But if she's just
20 going to throw around statistics that aren't in the
21 record and then I can't do the same on cross, then I
22 would respectfully object.

23 MR. KAINS: All right, I think it is -- there
24 has been testimony in this hearing about benefits,

1 financial benefits to school districts, including the
2 Charleston School District and in other school
3 districts. So, I think what Ms. Rogers is testifying to
4 is relevant. And, Mr. Hess, you will be able -- allowed
5 to cross-examine based on -- based on the numbers that
6 you have.

7 MR. HESS: Yes, sir.

8 MR. KAINS: So, we can get to that when
9 it's -- it's your turn.

10 Okay, Ms. Rogers, you may go right ahead.

11 MS. ROGERS: Yeah, to be clear, the numbers I
12 have are directly from the Illinois State Board of
13 Education Report Card. These numbers are based on 2024
14 expenditures. If you want to go back to 2010, they were
15 only spending \$9,000 per kid, but then COVID came and
16 COVID money came out and now schools are hurting for
17 money because the COVID money isn't rolling in because
18 they upped their ante on expenditures. So, they are
19 spending sixteen -- \$16,405 to be exact per kid in the
20 Charleston School District with a 34 percent proficiency
21 rate in reading and 16 percent in math. So, if you add
22 1.6 million dollars a year just for buildings is what
23 Mr. Litteken said would -- would be helping the
24 students, that is not helpful.

1 This is the scenario that plays out in
2 government all over the place. Kids are used to push
3 through legislation and push through projects that
4 benefit adults. This is lining the pockets of other
5 people and the kid -- on the kids' backs. And it is not
6 for -- good for kids. It is not good for their health.

7 The other thing I believe -- and you can
8 correct me, sir, if I'm wrong -- the 1.6 million promise
9 is based on the tax levies that are set by the State.
10 So, this is not a promise. This is something based on
11 current tax levies by the State. Currently, I don't
12 know about wind for sure, but solar and wind are very
13 similar in how they operate. I think it's \$124 per
14 kilowatt that the State is giving a tax -- you can
15 correct me. What is the -- what is the tax going to be?

16 MR. KAINS: Now, hang on, hang on.

17 Do you have an objection, Mr. Hess?

18 MR. HESS: I do, Mr. Kains. I would object to
19 the characterization of wind and solar are taxed
20 similarly. In Illinois, they are not. And I would
21 just -- respectfully, it's well beyond any expert
22 opinion that Ms. Rogers is able to give. So, I would
23 object on that basis.

24 MR. KAINS: I'm gonna sustain the objection.

1 Wind and solar are taxed differently. They are two
2 different types of projects. So, let's -- let's move
3 on to --

4 MS. ROGERS: Okay.

5 MR. KAINS: -- another discussion.

6 MS. ROGERS: So, my point is the tax levy can
7 change. Currently, there is a legislation going forward
8 to Pritzker's desk to change the tax levy from \$124 to
9 \$65. So, that 1.6 million dollars could quickly turn to
10 \$800,000. So, if the State legislature and their
11 lobbyists go to the State and change the tax levies --
12 quickly, the money that you have been promised is no
13 longer flowing. And, therefore, it is not a promise,
14 it's a hypothetical scenario you are being fed. Okay,
15 if you want to change the community and change the kids'
16 education, go read to the kids.

17 Health risks -- all right, so you heard from a
18 gentleman last week or two weeks ago -- however long ago
19 it was -- who had a heart issue. I was working in the
20 ICU at that time and had never seen anything like that
21 where his heart was essentially being defibrillated
22 every few seconds based on something that happened when
23 those turbines were fired up. His electrophysiologist
24 absolutely did say that this was due to the turbines.

1 MR. HESS: Again, I would respectfully object,
2 that mischaracterizes the evidence. He said he asked
3 the nurse in the emergency room, "Can you tell me what
4 caused this?" She said, "I can't tell you no," that was
5 his testimony. So, there's no --

6 MS. ROGERS: He's a nurse practitioner, sir.

7 MR. KAINS: Ma'am --

8 MS. ROGERS: (Speaking simultaneously.)

9 MR. KAINS: Ma'am --

10 MS. ROGERS: (Speaking simultaneously.)

11 MR. KAINS: Ma'am -- nope, nope.

12 MS. ROGERS: Okay.

13 MR. KAINS: Here's -- here's how this works:

14 You get to talk, and then when he has an objection --

15 MS. ROGERS: Okay.

16 MR. KAINS: -- he wait --

17 MS. ROGERS: Okay.

18 MR. KAINS: -- he waits until you finish your
19 statement.

20 MS. ROGERS: Okay.

21 MR. KAINS: Then, he gets to make his
22 statement.

23 MS. ROGERS: I'm sorry. I'm not a lawyer.

24 MR. KAINS: No, it's okay. Oh, no, you're

1 fine, but then I need to rule on his objection.

2 MS. ROGERS: Okay.

3 MR. KAINS: And then, it'll be your turn.

4 I'll let you know.

5 Okay, I'm going to sustain the objection
6 because that gentleman... He was from Newman, Mr. Jim
7 Allen, I believe --

8 MS. ROGERS: Yes.

9 MR. KAINS: -- was the gentleman who testified
10 on April 24th. As I recall his testimony, that it was
11 not -- it could not be causally connected to the
12 start-up of the wind turbines.

13 So, let's -- let's move on to your next area,
14 please. Go right ahead, Ms. Rogers.

15 MS. ROGERS: She did say that it was a large
16 electromagnetic field, it had to be. And that was the
17 only electromagnetic field he was around, so.

18 MR. KAINS: Mr. Hess, what's your recollection
19 of the evidence?

20 MR. HESS: I would respectfully object to that
21 and say we have the April 24th transcript. So, I think
22 that's the best evidence so we don't have to argue about
23 what was said.

24 MS. ROGERS: So, you guys have the

1 transcripts --

2 MR. KAINS: Wait, wait.

3 MS. ROGERS: -- but the public doesn't?

4 That -- sorry -- I'm -- this is a question --

5 MR. KAINS: It's okay.

6 MS. ROGERS: -- how do they have the

7 transcripts --

8 MR. KAINS: It's okay.

9 MS. ROGERS: -- but the public doesn't?

10 MR. KAINS: Ma'am.

11 What does the transcript say, Mr. Hess?

12 MR. HESS: May I have just a moment to find

13 the right --

14 MR. KAINS: Yeah.

15 MR. HESS: -- part? Thank you.

16 MR. KAINS: This is the testimony on April

17 24th of a Jim Allen from Newman, Illinois, who is

18 presently serving as their zoning administrator.

19 (Pause.)

20 MR. HESS: Mr. Kains, would you like me to

21 read it?

22 MR. KAINS: Yes.

23 MR. HESS: For the record, I am reading on

24 Page 111 of the April 24th transcript, this is the

1 testimony of Mr. Jim Allen. I'm starting at Line 2:

2 "The night that the Broadlands Wind Farm went
3 into operation, I went to bed and slept as normal until
4 4:00 a.m. At that time, I was awakened by my heart
5 beating violently. The strength at which it was beating
6 caused my entire left side of body from my chest to
7 abdomen to pulse everything. I went to my couch. I
8 tried to figure out what was going on. By the way, I do
9 have an IC --" this is where now I'm not going to know
10 what I'm saying -- "BiV ICD pacemaker-defibrillator.
11 For the next seven hours, I experienced muscle
12 contractions with every beat of my heart, and answers
13 were not forthcoming for a while. I was getting fairly
14 tired, by the way. I do have a Biotronic, so the staff
15 was trying to contact Biotronic to advise what
16 procedures to take place. The first call was made to a
17 location in Michigan, where the instructions were given
18 to call Biotronic in the State of Oregon. As my
19 pacemaker tech listened to the experts in Oregon and
20 Michigan on a conference call, he was able to reset my
21 pacemaker, and for the first time in seven hours, I
22 could relax. While she was on the phone, I asked, 'What
23 happened, and what could have caused it?' She said the
24 pacemaker had been disrupted and went into what's called

1 'safe mode,' during which, in this case, caused the
2 pacemaker to increase electrical charge to deliver each
3 beat, thus causing the muscle contractions." It says
4 "constructions," I think it's "contractions."

5 "I then asked, 'What could have happened?
6 What could have caused this?' And she said, 'The only
7 thing that could cause this is a massive EMI or
8 electromagnetic impulse.' I asked again, and she said,
9 'Nothing else could cause this to happen.' I did
10 inquire as to what if a large wind farm began
11 operating -- began operation could cause this happen.
12 She said, 'I won't say no.'"

13 MR. KAINS: Thank you, Mr. Hess. Okay.

14 MS. ROGERS: Thank you.

15 MR. KAINS: Now, hang on. Because Ms. Rogers
16 is from Edgar County, she was to only have 15 minutes.
17 We've obviously spent time with objections, so I'm gonna
18 give her an additional five minutes of time.

19 Okay, Ms. Rogers, go right ahead.

20 MS. ROGERS: Thank you. So, the basic thing
21 is infrasound and electromagnetic impulses can impact
22 health and can impact heart rhythms. We -- the heart
23 rhythm is determined by basically electrical physiology,
24 and so having a pacemaker may allow you to understand

1 that something's going on in your body much more easily,
2 but it does affect all of us. And I do have a study
3 here to reference, sir, if you need a study from a
4 scientist, other than me.

5 MR. KAINS: Okay. Now, your turn.

6 MR. HESS: Thank you. Ms. Rogers, I would
7 just respectfully object for the record that she's not
8 been qualified as an expert. I hear her, that 19 years
9 in an ICU makes her an expert as a nurse in the ICU, but
10 as far as presenting health studies, she has not
11 proffered herself as an expert. The requirement was
12 that every single one of our witnesses went through that
13 whole process. I would just state for the record that
14 has not happened here, so I would object.

15 MR. KAINS: And I am -- I am going to find
16 that Ms. Rogers, while she is a nurse and has been for
17 19 years, and I'm sure just by the way she has comported
18 herself in this hearing, that she's an excellent nurse.
19 But I'm -- I'm not going to allow her to give expert
20 opinions because there has to have been some study of
21 the wind turbines and their effects on human health for
22 somebody to be determined to be an expert witness.

23 But with that said, Ms. Rogers, you can say,
24 based on your experience, have you -- have you ever had

1 experience with a patient who has come in from a wind
2 turbine area?

3 MS. ROGERS: Mr. Allen.

4 MR. KAINS: Okay. Did you treat him that
5 night?

6 MS. ROGERS: I was there when he was admitted.
7 I was a charge nurse.

8 MR. KAINS: Okay. But did you treat him that
9 night?

10 MS. ROGERS: Well, we don't treat patients.
11 We do -- we give -- basically promote the orders and --
12 that doctors treat patients with.

13 MR. KAINS: Very good. Okay, thank you. All
14 right. Well, we've heard from Mr. Allen, so I don't
15 think we're gonna need to hear anymore about Mr. Allen's
16 case from you.

17 MS. ROGERS: Well, what I have is a study here
18 that I would like to reference.

19 MR. KAINS: Okay, tell us about the study.

20 MS. ROGERS: Okay, so an article published in
21 2023 in the *Journal of Biosciences and Medicines*,
22 "Impairment of the Endothelium and Disorder of
23 Microcirculation in Humans and Animals Exposed to
24 Infrasound Due to Irregular Mechano-Transduction," by

1 Maria Bellut-Staeck, an independent scientist. I would
2 note that she is independent, so she is not beholding to
3 people who are opposed to turbines or to the turbine
4 companies.

5 MR. KAINS: What's the name of the journal?

6 MS. ROGERS: The *Journal of Biosciences and*
7 *Medicines*.

8 MR. KAINS: What's the date on it, please?

9 MS. ROGERS: 2023. I have the actual journal
10 study in my purse if you would all like to have it --
11 have a copy.

12 MR. KAINS: That's all right. Hang on just a
13 second. Mr. Hess?

14 MR. HESS: So, the evidence that's been
15 presented mostly by Mr. Kaliski, citing seven different
16 studies, is that infrasound from wind is at less than
17 20 hertz. So, unless that study is showing sources of
18 infrasound at less than 20 hertz, I would object that it
19 is not relevant to wind-caused infrasound.

20 MS. ROGERS: It's 8 hertz.

21 MR. KAINS: I want to -- I want to hear what
22 the study says.

23 MS. ROGERS: The study says 8 hertz -- is
24 studying 8 hertz of sound, sir. She's been studying

1 mircocirculation and endothelial cells since 2004. This
2 is just a short portion of about a 20-page study. She
3 says infrasound is transmitted not only through the air,
4 but also through the ground via the power and can
5 penetrate houses. Buildings, therefore, offer no
6 protection. On the contrary, airborne and ground-born
7 infrasound can add up considerably indoors. Infrasound
8 can also affect microcirculation, the blood circulation
9 of fine capillary networks where oxygen and nutrients
10 enter the surrounding tissues. The knowledge recently
11 gained on endothelial mechano-transduction could
12 indicate the long-sought patho -- pathophysiological way
13 in which infrasound can exert stressor effects at the
14 cellular level. Noise-exposed citizens who live near
15 bigger industrial wind turbines show worldwide mainly a
16 symptomatology associated with microcirculatory
17 disorder. More precisely, it's the endothelial cells
18 located on the inner wall of the capillaries that react
19 to infrasound. In addition to transporting proteins,
20 these cells have many vital functions, such as
21 inhibiting inflammation and controlling blood pressure.

22 In a rat study examining the effects of
23 infrasound, researchers noticed endothelial swelling and
24 outer cell membrane damage within three hours of

1 exposure to infrasound with a frequency of 8 hertz.
2 Disturbed endothelial integrity is recognized as a main
3 cause for development of chronic inflammation diseases,
4 such as atherosclerosis, corresponding -- and
5 corresponding secondary illnesses, and possibly cancer.

6 So, my concern is, when people present with
7 inflammatory issues, such as cardiac issues, is this
8 even going to be correlated? How do we correlate and
9 say that infrasound is not a problem in a society where
10 people are suffering from heart disease at a large rate
11 because of other issues? Because we all have this
12 underlying baseline inflammation because of our diets
13 and everything. So, there are people who do really care
14 about their health and do really take their health
15 seriously who are eating a healthy diet, and things
16 would be affected by this, but it's really hard to tell
17 when 90 percent of the community maybe doesn't take
18 their health so seriously. It's very hard to correlate
19 a study.

20 MR. KAINS: Okay, Ms. Rogers, you have three
21 minutes remaining --

22 MS. ROGERS: Okay.

23 MR. KAINS: -- for your testimony. Go --

24 MS. ROGERS: All right.

1 MR. KAINS: -- right ahead. Go right ahead.

2 MS. ROGERS: So, the other thing I would just
3 say with safety when it comes to weather -- everybody
4 laughed at me about this for trusting a meteorologist,
5 but I'm gonna play this.

6 MR. KAINS: Well, what is it, first of all?

7 MS. ROGERS: It's when I asked about the
8 wind -- the wind farm affecting the ability to
9 understand incoming tornados and things.

10 MR. KAINS: What's -- what's the --

11 MS. ROGERS: This is news from, I think, WCIA.

12 MR. HESS: Channel 3, I believe, right?

13 MR. KAINS: Is it --

14 MS. ROGERS: I think so.

15 MR. HESS: It refers to the Sapphire Wind
16 Project, which is not an Apex Clean Energy Wind Project.
17 I would object on relevance.

18 MR. KAINS: Yeah, I'm -- I'm -- we're not
19 gonna -- we're not gonna play a --

20 MS. ROGERS: Well --

21 MR. KAINS: -- Channel 3 meteorologist, so --

22 MS. ROGERS: Well --

23 MR. KAINS: -- your objection is sustained.

24 Go ahead with the other material, please.

1 MS. ROGERS: So, I have friends who live in a
2 wind farm in Fowler that are small wind turbines and
3 they -- they didn't know when -- they've had them for
4 20 years and they have no idea when weather is coming
5 their way. And the thing is, when I brought this up at
6 the first meeting, I was laughed at, saying it can't
7 impact radar, we -- it doesn't impact radar. But in the
8 actual Coles County -- I don't know what the publication
9 is for your newspaper -- but it says, "An earlier
10 version of the project plans cause -- called for towers
11 up to 737 feet tall, but this past March after
12 discussion with the U.S. Air Force, the height was
13 lowered to ensure no impacts in military radar
14 coverage." So, my question would be, if it can impact
15 military radar coverage, how is it not impacting local
16 weather radar coverages, which I'm sure is inferior to
17 the military?

18 MR. KAINS: Do you have an objection?

19 MR. HESS: I would just object on hearsay
20 grounds to the part of her testimony about what her
21 friends are saying. I have no problem if Ms. Rogers
22 wants to express her concerns, but the --

23 (Speaking simultaneously.)

24 MR. HESS: -- have no objection to it.

1 MR. KAINS: Hang on.

2 MS. ROGERS: Okay.

3 MR. KAINS: I get to rule. I'm overruling
4 your objection. It's okay. What her friends say is
5 going to be allowed to come in. It is hearsay. In a
6 court of law, we're not supposed to listen to hearsay
7 testimony. This is a public hearing. We've already
8 heard what her friends said. So, go -- go right ahead.
9 You've got about a minute-and-a-half.

10 MS. ROGERS: All right. Lived experience is
11 what matters -- I know it's called "hearsay" to make it
12 diminish -- but lived experience is what matters, okay?
13 These people out here are gonna be living with this
14 decision. And their experiences will be called hearsay,
15 but that is what matters.

16 So, I just want to specifically address y'all
17 on the board here. Like, you guys have a big task at
18 hand. And they can tell you all day that you don't have
19 a decision, that I've heard many times them say, "What
20 we're doing meets ordinance standards. It meets
21 ordinance," basically insinuating that you have to say
22 yes, you have to vote yes because it meets the ordinance
23 standard. You do not have to. We would not be here for
24 the 11th meeting if there was no choice to be made. You

1 have a choice. Don't make yourselves lower and relieve
2 yourselves of the responsibility of the choice that you
3 have. You do have a choice.

4 And the money thrown around may make everybody
5 sleep better at night --

6 MR. KAINS: 30 seconds.

7 MS. ROGERS: -- but there is a proverb, 17:1,
8 that says that, "Better a dry crust in peace than a
9 house feasting with strife," and I think that's very
10 wise to remember. Money goes a long way for financial
11 peace, but it's the true peace that everybody has to
12 live with to sleep -- sleep at night.

13 MR. KAINS: Thank you, Ms. Rogers. Okay, hang
14 on, there's questions for Ms. Rogers.

15 MS. ROGERS: Okay.

16 MR. KAINS: First of all, questions from
17 members of the Coles County Planning and Development
18 Committee? All right.

19 Questions from --

20 MS. ZIMMERMAN: I have one.

21 MR. KAINS: Are you on the committee?

22 MS. ZIMMERMAN: Yes.

23 MR. KAINS: Oh, okay.

24 (Indiscernible speaking amongst members

1 in the jury box.)

2 MS. ZIMMERMAN: Oh, I'm sorry. No, I'm not.
3 I lied to you.

4 MR. KAINS: Okay.

5 MS. ZIMMERMAN: Never mind, sorry.

6 MR. KAINS: No, your turn will be next,
7 though, because next it's going to be members of units
8 of local government.

9 County Board?

10 Okay, could you please state your name for the
11 court --

12 MS. ZIMMERMAN: Bristole --

13 MR. KAINS: -- reporter.

14 MS. ZIMMERMAN: -- Zimmerman. Bristole
15 Zimmerman.

16 MR. KAINS: Can you spell your first name?

17 MS. ZIMMERMAN: B-r-i-s-t-o-l-e.

18 MR. KAINS: -o-l-e?

19 MS. ZIMMERMAN: Uh-huh.

20 MR. KAINS: Okay. All right, Ms. Zimmerman,
21 go ahead with your questions for Ms. Rogers.

22 EXAMINATION

23 BY MS. ZIMMERMAN:

24 Q. Can I have the title of the journal article

1 that you're referencing?

2 A. Yeah, sure. If you want a copy -- if anybody
3 else is interested, I have one copy in my purse and I
4 can email it to anyone else who is interested. The
5 article was published in 2023, *Journal of Biosciences*
6 *and Medicine*. The title of the article is, "Impairment
7 of the Endothelium and Disorder of Microcirculation in
8 Humans and Animals Exposed to Infrasound Due to
9 Irregular Mechano-Transduction."

10 Q. And Maria's -- the author's last name was?

11 A. Ursula Maria Bellut, B-e-l-l-u-t -- and I'm
12 probably saying her last name wrong -- dash, Staeck,
13 S-t-a-e-c-k.

14 MS. ZIMMERMAN: Okay, thank you.

15 MR. KAINS: Ms. Zimmerman, do you have any
16 other questions for the witness?

17 MS. ZIMMERMAN: No, I don't.

18 MR. KAINS: Okay. Any other questions from
19 the County Board? Yes, gentleman next to Mr. Shook.
20 You get to go next, Mr. Shook.

21 MR. SHOOK: Okay, I didn't see him.

22 MR. KAINS: I'm sorry, could you state your
23 name for --

24 MR. ROYAL: Tom Royal.

1 MR. KAINS: I'm sorry?

2 MR. ROYAL: Tom Royal, R-o-y-a-l.

3 EXAMINATION

4 BY MR. ROYAL:

5 Q. What were the three objections you had?

6 A. Well, I would say, mainly, the fact that they
7 are a health and safety risk. I would say they are a
8 lie, as far as what they purport to be as far as
9 offsetting and producing energy that is, quote, green.
10 And I would say land and landscape. The land use --
11 it's poor land use. So, those are my three objections.

12 MR. KAINS: Okay. Now, Mr. Shook.

13 MR. SHOOK: Thank you.

14 EXAMINATION

15 BY MR. SHOOK:

16 Q. You said you live in a different county?

17 A. Yeah.

18 Q. And do you have any wind turbines by you,
19 where you live?

20 A. We -- so, I live on -- kind of on the edge --

21 Q. Like -- like a mile away --

22 A. Yeah.

23 Q. -- or two miles?

24 A. No, ours are about eight to nine miles away.

1 We live kind of on the edge of Douglas and Edgar County.
2 So, we do see the Douglas County Wind Farm there at
3 Newman. We can see it right from our house.

4 MR. SHOOK: Okay. And just so that you know
5 and you folks know, that the governor is not gonna think
6 that he thinks that he can threaten me to tell me how to
7 vote either way. I just want to let you know and let
8 you folks know, that ain't gonna happen. So, I just
9 wanted the folks to know that, so thank you.

10 MS. ROGERS: Good for you.

11 MR. KAINS: Thank you, Mr. Shook.

12 (Applause.)

13 MR. KAINS: Okay, folks. Okay, any other
14 questions for Ms. Rogers?

15 Counsel, Mr. Hess, cross-examination?

16 MR. HESS: Yes, sir.

17 Thank you, Ms. Rogers. Thank you for your
18 testimony here tonight.

19 EXAMINATION

20 BY MR. HESS:

21 Q. Let's start with the health studies. You said
22 that's a 2023 study?

23 A. Yes, sir.

24 Q. Isn't it true that Mr. Kenneth Kaliski

1 testified here, authored a study in 2014 for MIT, which
2 is the 2014 MIT Kaliski Study that's been introduced
3 into the record, that says on Page 113, quote,
4 "Infrasound admitted by wind turbines but at the levels
5 at customary distance to homes are typically well below
6 audibility thresholds"?

7 A. Is that the gentleman that was hired by a
8 turbine company to do a study?

9 Q. That was our sound expert, yes.

10 A. Yeah, so he was hired by you guys to do the
11 study.

12 Q. Yes, ma'am.

13 A. Not independent.

14 Q. Yes, ma'am.

15 A. Okay. I'm not sure because the transcript
16 that you have, sir, were not available at the time. I
17 did those today and most of the transcripts were
18 available today. There are seven meetings available.
19 But a week ago when I was trying to prepare to speak,
20 no, they were not available. So -- and I was not at
21 that meeting.

22 Q. The studies have been on the website for
23 several weeks now, right?

24 A. Okay.

1 MR. KEYT: Hold -- hold on one second. I
2 just -- I'm -- I'm gonna object to the question. I'm
3 not sure, number one -- I think Mr. Hess had an
4 objection to her being qualified as an expert in that
5 particular area, but now he's asking questions on that
6 particular area, which if -- if that's the route he
7 wants to go, then that's opens the door to what she was
8 originally testifying about.

9 MR. HESS: May I respond?

10 MR. KAINS: Yes.

11 MR. HESS: I am only going to ask questions
12 about studies that have already have been introduced
13 into evidence. She has brought forth the study tonight,
14 as is her right, it's contradicted by the seven studies
15 that are part of the record. That's all I'm gonna
16 elicit on cross. I'm not going to ask her any other
17 opinions about that, just that the studies we submitted
18 say the opposite.

19 MS. ROGERS: I'm okay with --

20 MR. KAINS: Okay, hang --

21 MS. ROGERS: -- responding.

22 MR. KAINS: -- on, hang on. Mr. Keyt,
23 anything further?

24 MR. KEYT: I -- I don't think (indiscernible)

1 you're asking goes to that route, but it opens the door
2 to what she would testify to. If what it -- if that's
3 what he wants to do -- but if he objected to her
4 originally being called by -- in that particular arena.
5 So, if that's the route he's gonna go, then he opens the
6 door to that issue --

7 MR. KAINS: I think --

8 MR. KEYT: -- which is fine, but that's...

9 MR. KAINS: I think, Mr. Keyt, what Mr. Hess
10 is wanting to do is discuss the studies that his expert
11 has in evidence and ask if she's aware of those results.
12 So, I don't know that he's asking her any questions as
13 an expert witness.

14 All right, Mr. Hess, let's ask questions about
15 the studies.

16 And, Ms. Rogers, if you know the answer, you
17 may answer. If you don't, you can say, "I don't know,"
18 it's okay.

19 And, folks, this goes as a general rule to
20 anybody: It's okay to say, "I don't know" or "I don't
21 recall," you know, if you don't know, rather than
22 speculating and guessing because we want this to be
23 accurate. We want this to be right.

24 Mr. Hess, you have the floor.

1 MR. HESS: Thank you, Mr. Kains.

2 BY MR. HESS:

3 Q. The next study is the 2016 Health Canada
4 Study, a study not sponsored by Apex. Are you aware
5 that it also says, based on the existing literature,
6 there's no evidence of health effects from wind
7 turbines?

8 A. I don't think it actually said there's no
9 evidence. It may say there's no evidence, but I think
10 that it indicated there needs to be an ongoing study
11 because there was a concern about health effects, which
12 I think needs to be highlighted.

13 And to answer your last question, which I
14 didn't get to respond to, that was a 2014 study,
15 conducted by people hired by you. So, I'm inclined to
16 trust a newer, more recent study, 2023, just two years
17 ago, by an independent scientist.

18 Q. Okay, let's go to a new independent study.
19 Are you aware of the 2025, the Netherlands Health Study,
20 published two months ago, sponsored by the Government of
21 Netherlands, that looked at health records of several
22 million people --

23 MR. KAINS: Okay, that's -- that's the
24 question: Are you aware of the study that he's

1 referring to?

2 MS. ROGERS: I am not aware of that study, sir.

3 MR. HESS: I would just state for the record,
4 it's been introduced, it was Study Number 6. It's on
5 the website. That study found no evidence of health
6 effects from infrasound or any other costs.

7 MR. KAINS: Okay. All right, asks questions.
8 The board can -- the committee and the County Board can
9 look at these studies.

10 MR. HESS: Thank you, Mr. Kains.

11 BY MR. HESS:

12 Q. Ms. Rogers, you testified several minutes --
13 moments ago that the benefits from this project are
14 primarily money, is that right?

15 A. I didn't testify to that, I said that that's
16 what Mr. Moore said. I asked that question of
17 Mr. Moore, Mr. Litteken, and another gentleman, and I
18 got the same answer every time: "Yes, money."

19 Q. I believe your question to Mr. Litteken -- and
20 I also don't remember exactly how you worded the
21 question to Mr. Moore and that transcript is not
22 available -- "Would you agree that the primary benefits
23 are financial?" That's the question you asked
24 Mr. Moore.

1 A. Okay, financial is the same thing as money,
2 essentially. (Laughs.)

3 Q. Okay. All right, and so I want to make sure I
4 understand your testimony here tonight, Ms. Rogers. So,
5 basically your testimony is that we have financial
6 benefits and then these other concerns, and when you do
7 this balancing test, you're not convinced, is that fair?

8 A. Yes.

9 Q. Okay. Under the Road Use Agreement that's
10 been talked about several times during this hearing --
11 Coles Wind, we have to improve the roads, make them
12 safer roads. That would be a benefit that's not
13 financial, right?

14 A. That's financial. It takes money to improve
15 roads. Every improvement is financial. (Laughs.) This
16 is silliness.

17 MR. KAINS: Let's -- let's stick to facts, not
18 comments about whether something's silly or not.

19 BY MR. HESS:

20 Q. Mr. Carlson testified about repairing drain
21 tile, repairing it out ten feet to either side of a
22 strike so that it actually works better. That would be
23 a benefit to drainage in Coles County and benefit to
24 farmers, right, Ms. Rogers?

1 A. Okay, I can actually testify to that. My
2 husband and I are landowners. My husband has been a
3 farmer for 25 years. We actually have invested
4 thousands and thousands of dollars in tile projects for
5 our ground. We drain a lot of ground. And my husband
6 would tell you we've had other projects go across our
7 ground, and nothing is ever the same with tile. You
8 cannot undo compaction. You can make it look like
9 you're going to undo compaction and make things better
10 and find things better, but you are not going to -- you
11 will never fix that. The crane that has to go across
12 the ground has to be taken apart in pieces.

13 And you had a gentleman testify that you will
14 put boards down to have it go over the ground to make it
15 less compacted. This is -- you're talking to people who
16 do not know about tile. You do not know about tile.
17 You are not an expert on tile. I'm not an expert, but I
18 know more than you do, and I can tell you, it's not
19 gonna be the same. And it's -- it's -- it's not --
20 definitely not gonna be better, definitely not going to
21 be better. You may try to fix what you broke, but it
22 will not be improved.

23 Q. What about replacing culverts? In the Road
24 Use Agreement, we will likely be obligated to replace

1 culverts. That would be an improvement for the county
2 that is not strictly speaking financial?

3 A. That's financial. It takes money to redo
4 culverts. You're throwing money at problems.

5 Q. Let's talk about the Charleston School
6 District. Your testimony was that adding 1.6 million
7 dollars is not helpful. That was your testimony, right?

8 A. I'm -- my testimony is it is not the kind of
9 help they need when they're already spending that kind
10 of money and not getting the results.

11 Q. Isn't it true that in a 2024 annual budget,
12 they reported a \$1,799,641 deficit in their educational
13 funds?

14 A. Okay, but --

15 MR. KAINS: Do you know that to be true or not?

16 MS. ROGERS: I don't know that to be true.

17 MR. KAINS: Okay, very good. Ask another
18 question.

19 BY MR. HESS:

20 Q. Ms. Rogers, you talked about the weather
21 radar, and you attempted to play a clip from a
22 meteorologist. Would you agree that meteorologist was
23 referring to the Lincoln Weather Radar?

24 A. He was not referring to the weather radar

1 here, I can tell you that. But he was referring to --
2 he was referring to -- if you would've let me play the
3 clip -- he was referring to wind turbines at large. He
4 was not referring to a specific project. He was talking
5 about a spot on the radar and speaking to wind turbines
6 at large being a problem. And two meteorologists went
7 back and forth for three minutes about that.

8 Q. Well, you were here on March 19th?

9 A. Yes -- no, I was here on March 17th, I
10 believe.

11 Q. Okay, so you missed Ms. Anderson's testimony?

12 A. Yes.

13 Q. Okay, so you missed when Mr. Borgman raised
14 this exact issue with Ms. Anderson?

15 A. And Ms. Anderson is your hired expert?

16 Q. She wrote our permit application.

17 A. Okay.

18 Q. So --

19 A. So, she -- she's on your payroll?

20 MR. HESS: May I, since she was not here on
21 March 19th, just quote, for her, the transcript?

22 MR. KAINS: Ask -- well --

23 MR. HESS: And then I'll have a question right
24 after it.

1 MR. KAINS: All right. It better be short.

2 BY MR. HESS:

3 Q. On Page 83 of the March 19th transcript,
4 Mr. Borgman says, quote, "I went back and I found the
5 post that was made by the meteorologist. It was
6 Channel 3. And it says right on here, it says, 'Since
7 you can't count on the Lincoln Doppler Radar to track
8 storms through wind projects,'" end quote. So, the
9 meteorologist was raising a concern about the Lincoln
10 Weather Radar, right?

11 A. No, sir. It was a three-minute-long clip
12 almost and they talked -- he may have cherry-picked one
13 portion of that since he's on your payroll, but he
14 talked for three minutes about wind turbines at large,
15 sir. And --

16 Q. I don't mean to interrupt, Ms. Rogers.

17 A. Okay. It's okay.

18 Q. Well, just to make the record clear, I was
19 quoting Mr. Borgman.

20 A. Yeah, well, I think the -- the -- it boils
21 down to, you would like to trust the people that you
22 have paid to speak over the people who live in the
23 community and actually do the weather.

24 Q. Isn't it true that we've submitted a letter

1 from the United States Department of Commerce, dated
2 February 2nd, 2023, that says, quote, "Commerce has
3 completed our review of the subject wind farm proposal
4 and found the project area is over 108 kilometers
5 east -- southeast of the Lincoln, Illinois, NEXRAD.
6 Based upon distance and terrain, this project appears to
7 be radar neutral"?

8 MR. KAINS: Radar what?

9 MR. HESS: Neutral.

10 MR. KAINS: Okay, thank you.

11 BY MR. HESS:

12 Q. Isn't it true?

13 A. So, there isn't -- so, there isn't --

14 MR. KAINS: The question is, "Isn't that
15 true?" If you know.

16 MS. ROGERS: I don't know if you're telling
17 the truth. (Laughs.)

18 MR. KAINS: Well --

19 BY MR. HESS:

20 Q. Isn't it true that we have submitted --

21 A. No, I mean, I don't know. I don't know.

22 (Audience members laughing.)

23 MR. KAINS: Okay.

24 MS. ROGERS: No, I mean, really, like how am I

1 supposed to know if he's...

2 MR. KAINS: No, he was reading from a
3 document. But let's -- let's stop reading from
4 documents because I don't think she's read every
5 document that's been submitted.

6 MR. HESS: May I ask just to make that clear
7 in the record, and then...

8 MR. KAINS: Ask her if she's read this letter
9 from the department -- is it Department of Commerce?

10 MR. HESS: It is from the National
11 Telecommunications and Information Administration, the
12 quote is from Commerce.

13 MR. KAINS: Is she familiar with this letter?
14 What's the date?

15 MR. HESS: There's two letters. The first one
16 is February 2nd, 2023.

17 MS. ROGERS: No, I did not read the 2023
18 letter, sir.

19 BY MR. HESS:

20 Q. How about the February 20th, 2025, letter that
21 we've also submitted in this hearing?

22 A. No, sir.

23 MR. KAINS: All right, those are already in
24 evidence or they will be in evidence once we get to the

1 exhibits. All right, do you have anything else for this
2 witness?

3 MR. HESS: No, sir.

4 Ms. Rogers, thank you for your testimony.

5 MR. KAINS: Okay, very good. Thank you,
6 counsel.

7 All right, questions from members of the
8 public, those in favor of the application, or those
9 neutral on the application. Any questions from the
10 public for Ms. Rogers from those two categories? All
11 right, very good.

12 Coles County Staff and Consultants,
13 Mr. Lockhart?

14 MR. LOCKHART: No, sir.

15 MS. ROGERS: There's a man back there raising
16 his hand.

17 MR. KAINS: Oh, I'm sorry. Oh, Mr. Borgman,
18 I'm sorry. I didn't see your hand up and --

19 MR. BORGMAN: Yeah, I think since we didn't
20 have a health expert --

21 MR. KAINS: I know -- I know you're neutral on
22 this -- but at least you were at the beginning.

23 MR. BORGMAN: Yeah.

24 MR. KAINS: Where -- where are you today?

1 MR. BORGMAN: I'm neutral.

2 MR. KAINS: Okay, all right. And from what I
3 understand from the testimony a minute ago, you may have
4 had a new job with Apex. I'm joking.

5 (Audience members laughing.)

6 MR. KAINS: Go -- go ahead, Mr. -- this is
7 Phil -- can you state your name for the court reporter?

8 MR. BORGMAN: Yeah, it's Phillip Borgman,
9 B-o-r-g-m-a-n.

10 MR. KAINS: Go right ahead, Mr. Borgman.

11 EXAMINATION

12 BY MR. BORGMAN:

13 Q. Ms. Rogers, do you know anything about wind
14 turbine syndrome or vibroacoustic disease caused by
15 windmills?

16 MR. HESS: And I would object to that
17 question. She's not qualified as an expert on any
18 syndromes.

19 MR. KAINS: Well, the question is: Does she
20 know anything about it? I'm gonna allow the question.
21 Your objection's overruled. I'll allow the question.
22 Let's see what the answer is.

23 MS. ROGERS: All I know about it is what I
24 have studied for the last ten-plus years, just reading

1 people's testimony and speaking to people in person. I
2 do know, personally, people who have moved from their
3 homes based on that. So, I -- I would say you're
4 probably going to hear from the lawyers that it's
5 hearsay, but, again, personal experience is -- yes, it's
6 an issue.

7 MR. KAINS: I'm gonna ask this question: In
8 your studying these syndromes, was that part of your own
9 interests or was that part of your employment as a
10 nursing supervisor?

11 MS. ROGERS: Part of my own interests.

12 MR. KAINS: Okay.

13 MS. ROGERS: They don't really pay us at the
14 hospital to learn anything new.

15 MR. KAINS: Gotcha, very good.

16 Okay, go ahead, Mr. Borgman.

17 BY MR. BORGMAN:

18 Q. Have you, in your studies or experience, seen
19 where the wind turbines cause earaches, imbalance,
20 lowered auditory threshold, tinnitus; cardiovascular
21 problems, such as altered heart rate, chest pains, cold
22 extremities, especially hands and feet, heart
23 arrhythmia, internal bleeding, lowered/raised blood
24 pressure, nosebleeds, shortness of breath, thrombosis

1 effects; cognitive problems, including confusion,
2 difficulty in learning new things, lack of
3 concentration, short-term memory impairments, spatial
4 disorientation, brown sun spots; the following
5 sensations, dry skin, facial flushing, growths and
6 lumps, insect bites and stings, severe acne, skin
7 irritations, skin rashes, skin tingling, swelling of the
8 face and neck, and I can go on and on.

9 MR. KAINS: Okay.

10 Q. But there are studies -- and I didn't know if
11 you'd seen the same studies that I have?

12 MR. KAINS: Okay, before you go on and on.

13 MR. BORGMAN: Uh-huh?

14 MR. KAINS: Mr. Hess, do you have an
15 objection?

16 MR. HESS: I would have the same objection.
17 It's well beyond the scope of her expertise as an ICU
18 nurse.

19 MR. KAINS: Yes, it is. And I'm going to
20 sustain the objection and direct the committee that --
21 to disregard that question. Because, obviously,
22 Mr. Borgman, by way of question, is trying to testify.
23 He can have a chance to testify at a later time, but
24 that's not appropriate cross-examination for this

1 hearing.

2 MR. BORGMAN: But she's the closest thing to a
3 health expert that we've had up here about the wind --

4 MR. KAINS: Except she's not --

5 MR. BORGMAN: -- and can --

6 MR. KAINS: -- an expert, Mr. Borgman. I
7 don't care if she's close or not. She's not an expert
8 in this field. She's, I'm sure, a quite-qualified and
9 incredible nurse just based upon my experience of what
10 I've seen, but she's not an expert in the field and
11 close enough doesn't count. So, go ahead with another
12 question.

13 MR. BORGMAN: That's all I got.

14 MR. KAINS: Okay, very good. Thank you, sir.

15 Any other questions from folks who are either
16 in support of or neutral on the application?

17 All right, Mr. Keyt, on behalf of the Coles
18 County Board?

19 MR. KEYT: I -- I just want to clarify, is
20 the -- has the study been admitted into the record that
21 she's referenced?

22 MR. KAINS: No, it has not.

23 MR. KEYT: Okay, then, I guess we need to take
24 up whether it has or is going to be admitted or not

1 admitted. I think that's the only question because I'd
2 be fine -- we're on night 11, whatever it is, and I
3 don't know if Ms. Rogers could be here whenever we take
4 up the evidence question of the admission of evidence.
5 So, I think if somebody's gonna bring in evidence at
6 this juncture, we need to take it up now. Obviously,
7 the --

8 MR. KAINS: Yep.

9 MR. KEYT: -- wind farm's evidence, we can
10 take up at the end, but if somebody -- not everybody may
11 not be here on the last night when we take this up,
12 so --

13 MR. KAINS: Thank you.

14 MR. KEYT: -- I think we need to resolve that
15 issue.

16 MR. KAINS: Thank you, Mr. Keyt. I think it
17 is important that we have this discussion on the
18 admission of the study that was referred to in
19 Ms. Rogers' testimony.

20 Your feeling on this, Mr. Hess?

21 MR. HESS: Thank you, Mr. Kains. I mean, I
22 would like to see the study.

23 MR. KAINS: Uh-huh.

24 MR. HESS: Infrasound from wind turbines is to

1 a hertz and a decimal -- decibel component, and if it's
2 not satisfying both, I would object that it's not
3 relevant. My suggestion would be, in the interest of
4 time, if Mr. Keyt wants to ask questions while it's
5 pending, I would not object, as long as I have an
6 opportunity to argue either to the admissibility or the
7 relevance of the study once we've had a chance to all
8 see it.

9 MR. KAINS: And I think during the break, we
10 can all take a look at -- you said you have a copy here?

11 MS. ROGERS: I do.

12 MR. KAINS: Okay, very good, thank you.

13 MR. KEYT: For -- for the record, I don't have
14 an objection to the document going into evidence, so.

15 MR. KAINS: Do you have any questions of
16 Ms. Rogers based on her testimony?

17 MR. KEYT: No, I don't have any questions of
18 Ms. Rogers --

19 MR. KAINS: Okay.

20 MR. KEYT: -- but I also --

21 MR. KAINS: All right.

22 MR. KEYT: -- think that the --

23 MR. KAINS: All right.

24 MR. KEYT: -- go -- go ahead.

1 MR. KAINS: We're still a well away --
2 45 minutes away from possibly recessing for a break, but
3 at that time, we'll take a look at that --

4 MS. ROGERS: Okay.

5 MR. KAINS: -- study and consider whether it
6 comes in as evidence.

7 All right, then final questions for this
8 witness come from members of the Planning and
9 Development Committee.

10 All right, Ms. Rogers, thank you for you
11 testimony. You may step down.

12 Okay, Mr. Terry Smith.

13 (Pause.)

14 MR. KAINS: Good evening, sir.

15 MR. SMITH: Good evening.

16 (Witness sworn.)

17 MR. KAINS: Very good, thank you. Go ahead
18 and have a seat. Okay, and your name?

19 MR. SMITH: Terry R. Smith, Jr.

20 MR. KAINS: Can you spell your first name for
21 the record?

22 MR. SMITH: T-e-r-r-y.

23 MR. KAINS: Okay, go ahead, Mr. Smith. Oh,
24 first of all, your address -- or not your address, just

1 hometown.

2 MR. SMITH: I live in Hindsboro. Live on
3 1900 North, which is the county-line road. It's --
4 my son lives on the north side of the road. I live on
5 the south side.

6 MR. KAINS: Which county are you in?

7 MR. SMITH: Coles County.

8 MR. KAINS: In Coles?

9 MR. SMITH: He's in Douglas.

10 MR. KAINS: Okay, real good. If -- if you
11 want to, you can take -- by rule, you can take up to one
12 hour of time. I don't think you're probably gonna do
13 that, but --

14 MR. SMITH: No, let's hope not. I got to get
15 up at 3:15.

16 (Audience members laughing.)

17 MR. KAINS: Okay, go right ahead, Mr. Smith.

18 TERRY SMITH,

19 called as a witness, being first duly sworn,

20 was examined and testified as follows:

21 TESTIMONY

22 MR. SMITH: I've been coming to these meetings
23 and, first of all, one thing that bothers me is we -- we
24 were never told by landowners or by anybody that the

1 wind turbines were coming in. All of a sudden, they
2 were just kind of thrown in our face. Now, you've had
3 your expert witnesses up here and several of them have
4 said that -- one of them said that, no, they would not
5 build their house near one or close within a certain
6 footage of one. They've talked about the shadow
7 flickering. They've talked about -- I guess, I've lived
8 in my house for over 20 years. So, my wife grew up in
9 this house. She's now 50. She don't look her own age.
10 But -- but anyway, this whole area's gonna change, not
11 by our choice, but by yours and the landowners. And I
12 don't see -- first of all, I don't think that it's fair.
13 I think that we should have a right to understand and
14 know what's going on.

15 One thing I'd like to talk about is the size
16 of these things. Now, I know that you don't own the
17 ones up in Newman. I have a two-story house. Every
18 night, I see flashing red lights off in the distance and
19 I see these wind turbines. And I'm about 20 miles or so
20 away from them. Now, I'm gonna live 1,100 or 1,200 feet
21 away from the first one, probably a little bit farther
22 from the second one, then the third one. Every day, I'm
23 gonna have to look at these wind turbines.

24 None of you live by them. Not a single one of

1 you live anywhere near these wind turbines. You don't
2 have to look at them. You don't have hear them. You
3 don't have to see them.

4 And I'm not verifying whether you can hear
5 their wind turbines. But I did what you said, and I
6 went up and I looked at the wind turbines and, yes, you
7 can hear them. Maybe not a whole lot, but if I'm
8 sitting out in my yard in the swimming pool I just put
9 up, I'm gonna see a big wind turbine, and I'm gonna hear
10 it. I'm gonna see the flashing red lights. I'm gonna
11 have shadow flickering. You guys say that there is no
12 health risks to this, but yet, your -- your guy says
13 that it's annoyance. So, it's okay for me to be annoyed
14 and get health problems because you won't allow wind
15 turbines to be put up, but they're yours.

16 These landowners, it's all about the money.
17 And I'm -- my father-in-law farmed for a long time. And
18 let's take, for instance, 15 -- let's say -- you say
19 it's less than one acre. So, if you're gonna have -- I
20 figured up awhile ago -- one acre, let's say your beans
21 are 80 bushels at \$15, which is good money, that's
22 \$1,200. Corn, 200 bushels, that's \$4, is \$800. If it
23 wasn't for the money, then why not just give them the
24 land for free? Just let them have it. It's -- it's

1 supposed to be for the people.

2 You know, it's supposed to bring our taxes
3 down is what they say. They're not gonna bring our
4 taxes down. All they do is go up. Our storms are
5 worse. Ever since wind turbines and the high-voltage
6 power lines have all come in, all of our storms are
7 worse. Our insurance is going up. And that's all
8 that's gonna happen.

9 Now, I'm not here to say that we can hear a
10 signal or a satellite or there's any -- any radar
11 interference about whether a storm's coming. But what
12 happens if we don't? You can't stop it. You can't help
13 me hear it. By the way, you're gonna live far off in
14 the distance where you don't have to worry about it
15 because they won't interfere with your radio or your TV.
16 Is my cell phone gonna work? Is my TVs gonna work? You
17 don't know that.

18 If -- these experts that come in, how's come
19 there was not one medical expert? Not one single
20 medical expert that says, "There is no health risks."
21 Because they don't know. They said when, at the
22 beginning, that they were American-made, and then all of
23 a sudden we start hearing parts that come from Mexico
24 and everywhere else. They're not American-made.

1 They're not made in the United States. The power's not
2 going to us, it's going to somebody else. We have to
3 look at them while they get the rewards for the power.
4 Our power bills are sky-high. I did put wind -- I put
5 solar panels up, hidden behind my shed, because I don't
6 want everybody else to have to see them, but it does
7 help my power. I'm not against clean energy, but I am
8 against something that's 700 feet that's gonna be next
9 to my house. Now, if I didn't have to look at it, I
10 still wouldn't put it in somebody else's.

11 Let's talk about if the landowners -- if the
12 landowners around here -- and I know Mike Litteken and
13 all of them. They are good people, but they didn't go
14 ask their neighbors what they thought. They didn't ask
15 you what you thought about a wind turbine or what -- you
16 know, "Would you mind looking at one every day?" All
17 they did was sign a paper, what, four or five years ago,
18 and now we're here where we're at now. You go -- the
19 Good Neighbor Fund. To me, that's kind of like buying
20 boats. "I'm gonna give you \$3,000 or you \$4,000 or you
21 \$7,000." I don't know what these people make, but
22 you're paying them to, what, keep quiet or not say
23 anything about the wind turbines or whatever? You're
24 paying off people.

1 If you want to put up wind turbines, take them
2 to some desert area where nobody wants to live. Don't
3 put them next to people's houses. You got, what,
4 30-some-thousand people or more that live in that -- in
5 the Charleston area and out by Mattoon. If we were all
6 to take a vote, these country people aren't gonna win
7 because there's not very many people out in the country.
8 I asked these people if they bought houses and they said
9 no, but they did buy houses. They had to buy the
10 houses, so that way they could sell the other one
11 because people wouldn't sign the paper that agreed upon
12 it. I wouldn't sign the paper, even if I was asked. I
13 don't need their money. I like where I live and I like
14 the way it looks right now.

15 So, if we go to my next one, you know, we
16 already talked about the expert. You know, for the
17 farmers getting the money, they talk about how hard
18 times, whatever. I don't know about you guys, but I
19 don't know a broke farmer. Maybe you guys do. All I
20 know is I see them driving new trucks, big trucks,
21 buying \$400,000 tractors. They all got four or five
22 tractors. Man, it's not even farming anymore. It's
23 a -- it's a business where they go in and they just try
24 to take ground out from underneath -- from under each

1 other. "I'll pay a hundred cash rent and I'll rip it
2 out from under you." It's -- you guys are basing this
3 stuff upon people that live in the country that want to
4 stay living there.

5 Now, going to that part, I'm gonna tell you,
6 do you know what histoplasmosis is? It is a fungus that
7 lives in our soil. I have pictures if you want to see
8 them. You want to see?

9 MR. KAINS: Nope.

10 MR. SMITH: I've got dead chickens. And
11 (indiscernible) come through, the guy couldn't pay for
12 his -- or his fertilizer, whatever he was trying to do,
13 so he goes to the chicken farmer in Farina. And he
14 started buying all this ground up here around us because
15 he knew the wind turbines were coming in. So, he took
16 ground out from under farmers that had been farming it
17 for a long time because of this money. Now, they say --
18 the Bible says, "Money's the root of all evil," and I
19 believe it. Because it's gonna destroy lives.

20 Anyway, histoplasmosis is an airborne fungus.
21 It's in our soil. It comes from many things, but it
22 comes from chicken manure. Raw chickens, this guy
23 planted out in his field, dead chickens, feathers, the
24 eggs, drove them down the county line, threw them on my

1 son's property, had stockpiles. He brings in a skid
2 loader and just started piling it up, two stories tall.
3 I went down and I asked him to move it. He wouldn't
4 move it because it's his right. Well, no, it wasn't his
5 right, and guess what? He's gonna pay for it. Douglas
6 County Health Department and Coles County Health
7 Department have all the information.

8 This fungus affects people, airborne, that
9 have a -- an immune system. My son was doing very good.
10 He has Crohn's. So, yes, he already was sick. He has
11 Crohn's disease, had it since he was 12. I didn't know
12 what it was. All I knew is, he started losing weight,
13 and we couldn't figure out why. They told me what it
14 was, and I started bawling. I don't know anything about
15 it, but I know he had it bad enough that it was gonna
16 kill him. So, he got on the medicine. Remicade worked
17 great, but let me tell you something: The medicine's
18 expense. So, these damn farmers that want to tell you
19 that they're broke, try having the State deny your
20 medical because they can't pay for it because it's too
21 expensive.

22 So, then we turn around and he catches this
23 histoplasmosis, airborne disease. Well, the farmer knew
24 it was illegal or whoever he was getting it from because

1 all the sudden arson is what burnt down the chicken
2 farm. You can look it up, Channel 3 News. It was
3 Farina, Illinois.

4 So, then, I'll tell you what happened. His
5 organs started shutting down. His heart. His teeth.
6 His liver. His body. They finally found a medicine. I
7 don't know how long this medicine will work. He's
8 always gonna have this in his system. We didn't find
9 out that he had it because Sarah Bush couldn't figure it
10 out. They couldn't get the blood tests back quick
11 enough.

12 So, the doctor that was coming from Chicago
13 told us that "you need to get to Mayo Clinic." Well,
14 guess what? Nobody else wanted him. They didn't want a
15 kid during COVID time that was about to die. So, they
16 didn't know what to do. So, Jared, my son, calls and he
17 gets ahold of the hospital. And they said, "If you can
18 get here tomorrow, we'll take you." So, what'd we'd do?
19 We had the doctor sign the paper. We take off. We go
20 to Mayo Clinic.

21 They run all the tests. They find out that
22 it's histoplasmosis and blastomycosis. He was lucky
23 enough to get both of them from the same crap this guy
24 was spreading on the fields.

1 Now, this stuff that he spread on the fields,
2 that's where seven, probably, I think -- five or seven
3 of your guys' wind turbines might go. So, 200-foot
4 wings are gonna power this dirt straight towards his
5 house because the first one is right across the yard
6 from him. Right across from him. But keep in mind,
7 nobody came and asked what anybody thought about what
8 they would like about these wind turbines. They just
9 gonna talk to the landowners and you're gonna put them up.

10 What's he to do? His only option with this
11 thing going up is to move. He has to find a house and
12 move. 22 years old and almost owns his own home and now
13 he's gonna have to sell it because -- if he can sell
14 it -- because of these wind turbines.

15 And, yes, I know, the guy is still working the
16 ground until this court case is over. You said there
17 was no court case. There is a court case. It is filed.
18 It will go to court. There's four doctors that are
19 gonna testify on behalf that this soil is the exact same
20 histoplasmosis that is in his body.

21 Now, yes, you can spread chicken manure on the
22 ground because you -- you're supposed to pelletize it.
23 Well, this -- this guy thought I was an idiot. Well,
24 let me tell you, when you take a -- get a sprayer

1 license -- I made my father-in-law mad because I wasn't
2 spraying on days he wanted me to spray and you know why?
3 Because it all goes in their computer system and you're
4 gonna put your name on it. Well, this guy put his name
5 on it. He knew he spread it. It was wrong. He knew it
6 was wrong. So, when he told us that he wouldn't do it
7 anymore, he just started hauling it at night, but he
8 didn't know that I get up at 3:15 in the morning. So,
9 guess who has the pictures of him hauling in more?

10 It's not -- there are things -- and I can't
11 believe you guys didn't do a soil test on it and find
12 out what's in the -- in this soil. You got all the
13 experts -- that you pay all these experts, but not one
14 single medical expert did you get. Not one person did
15 you get to look at the soil and see what might be in
16 this soil. You didn't find out how the farmers farmed
17 the ground. You didn't find out what they do. We still
18 live on a water -- underground water. We didn't get the
19 rural water. It -- so, what are you gonna do about the
20 water? There's so many things that were not done during
21 this. And I'm not saying that maybe somewhere else
22 where nobody else lives, maybe it'd be a good idea to
23 put these things up. But I'm gonna tell you that there
24 are health risks with this.

1 And now, going back to Jared, he has a bag on
2 his side, a colostomy bag. The doctor was putting it in
3 and they did something -- in Indiana, they did something
4 to his nerve and they cut his nerve. So, this poor boy,
5 cathetered for almost a year because -- before they
6 could find out what it was. And, yes, you're -- it's
7 not -- it had nothing to do with the soil this time. It
8 was -- it was a medical error. But now he has this
9 little thing in his back that has wires attached to his
10 spine that allows him to pee. It is a one -- one-shot
11 thing. Do you know he can't be -- he can't go near big
12 magnets? He can't be near certain areas because that
13 may shut down. He carries something that looks like a
14 cell phone and he dials it in. And he can feel the
15 pressure, but whether or not it's gonna work so he can
16 pee. If this thing goes bad, he doesn't get another
17 one.

18 Now, I'm not saying that a medical or a -- a
19 magnetic field or anything -- I don't know. You're
20 right, I'm not an expert. But I do know that what if
21 they're wrong? What if there is? What in that guy's
22 pacemaker was set off because of it? What's he do when
23 his doesn't work? He's gonna catheter for the rest of
24 his life at 22 years old. It's not -- you can't base

1 things off of just what experts say because there's a
2 thousand experts.

3 And you're right, you talk about the
4 Netherlands and all these places that have these wind
5 turbines. I don't know how close their houses are to
6 them. I don't know if these people are sick because I
7 don't go there.

8 But you're taking a chance on my son's life,
9 to tell him that it's not gonna matter because your
10 experts say that there's no problem, but -- but not any
11 of you live next to these things. Neither one of you.
12 You had one expert that did, and all the sudden, he
13 moved. I don't know why he moved, but I -- I don't
14 understand if -- if there is an idea, if there is even
15 one case or two cases or three cases that somebody can
16 get sick from one of these things, why do you want to
17 put it near somebody's house? You're not gonna pay his
18 medical bills. You're not gonna pay for anybody out
19 here who gets sick. You're not gonna pay for the
20 annoyance that somebody might get. Might cause health
21 problems. You damn right I'm gonna be annoyed because I
22 don't want it in my yard. Be like me putting a hog farm
23 in the middle of Charleston. How many complaints would
24 you get? Or in the middle of Mattoon. It's not fair.

1 But that's all I have.

2 MR. KAINS: Okay, very good. Thank you,
3 Mr. Smith.

4 All right, questions for Mr. Smith from
5 members of the committee?

6 County Board?

7 Ms. Zimmerman?

8 EXAMINATION

9 BY MS. ZIMMERMAN:

10 Q. So, the chicken -- the dead chickens, first of
11 all, what does that smell like?

12 A. It's horrible. Matter of a fact, you can
13 smell it five or six miles away.

14 Q. Okay.

15 A. Sometimes farther, it depends on the wind.

16 Q. It...

17 A. It's -- we live two miles from 133, basically
18 what it is. 1900 North and then it starts 00.

19 Two miles south of us -- or a mile south of us is the
20 first field that he started putting it in. That was
21 near Phil Borgman. And what he did was, this guy
22 brought it in, he had it stockpiled over near some bins.
23 So, the first time we all smelled this horrible smell,
24 we just thought that it was rotten beans. I mean, it

1 was next to a bin, we figured something went bad and he
2 was scooping it out.

3 But then later on, talking to Phil Borgman,
4 Phil had filed a complaint because he couldn't get rid
5 of the bugs and the -- the odor, the smell, and it was
6 around 4th of July and they couldn't even sit outside.
7 So, you know, this guy come. He -- he offered him some
8 beef from his freezer, told him he wouldn't do it and he
9 was sorry. And all that he did was the following year,
10 he moved it closer to my son's house and brought even
11 more.

12 It's -- it's for -- some people do use
13 fertilizers, horse manure or whatever, but the reason
14 why they put it on is because that's where they get, you
15 know, to help the crops grow. It's -- I mean, it's a
16 natural fertilizer, whatever. But there's restrictions
17 to it, just the same as spraying or anything else that
18 you're gonna do. So, this manure that they spread
19 normally is pelletized because you don't smell it. It
20 goes in, just kind of like hog manure. Hog manure
21 cannot just be put in the back of a spreader and then
22 spread through a field because of the odor, because of
23 the smell. And it can reach -- you can smell it for
24 five miles and more. So, I don't know where you're

1 from, but you know where 133 is.

2 Q. Yeah.

3 A. Okay, the stop signs at 133, three miles past
4 that, those people could smell it. So, that's -- that's
5 a little bit farther away, but it probably depends on
6 how much you put out.

7 Q. I'm familiar with farmers doing things like
8 that, but I don't know the details of -- so when you say
9 the pellet, is that something they have to buy like that
10 or he was -- was he avoiding like dumping it?

11 A. He was avoiding -- well, what he was doing was
12 probably getting -- getting something for free --

13 Q. Okay.

14 A. -- but now we don't know what the records were
15 because the -- the whole place burnt down. You watch
16 the video, this end started on fire, this end started on
17 fire, and it went towards the middle, and it was all
18 caught on a guy's door camera.

19 Q. Okay.

20 A. It's -- you send it off to have it pelletized.
21 Honest people and all them, they all use their -- their
22 horse manure or cow manure, whatever, and it can be
23 spread because it's not -- it's not the same. Hog
24 manure can't and chicken manure can't and I don't think

1 turkey either. But, normally, they're all pelletized.

2 MS. ZIMMERMAN: Thank you.

3 MR. KAINS: Thank you, Ms. Zimmerman.

4 Any other questions from members of the
5 County Board?

6 MR. BENNETT: Yes, sir.

7 MR. KAINS: Could you please state your name
8 for the court reporter?

9 MR. BENNETT: Bob Bennett, B-e-n-n-e-t-t.

10 MR. KAINS: Go ahead, Mr. Bennett.

11 EXAMINATION

12 BY MR. BENNETT:

13 Q. Mr. Smith, you testified that you didn't sign
14 a contract to let a wind turbine be on your property?

15 A. No. Well, I was never asked but --

16 Q. Right.

17 A. -- I wouldn't sign it, no.

18 Q. That's all right. Well, you did -- you
19 testified that some farmers near you did sign a
20 contract?

21 A. Well, the landowners, yes.

22 Q. Yes, and you testified that some of those you
23 know and they're nice folks?

24 A. The landowners -- matter a fact, the guy that

1 I bought my house off of, I bought and then I sectioned
2 it off. We -- my father-in-law farmed for him for over,
3 I don't know, gee, 45 years. His dad farmed for him.
4 Well, then the kids took over the land, and they all
5 live in Chicago, so none of them live around here.

6 Q. My question is that do you know that some of
7 those nice folks that signed a contract, if they had a
8 change of heart, can they back out?

9 A. No, I don't.

10 Q. You may not know the answer to that question.

11 A. They are -- as far as I know, they can't back
12 out.

13 MR. BENNETT: Thank you.

14 MR. KAINS: Any other questions, Mr. Bennett?

15 MR. BENNETT: That's it. Thank you.

16 MR. KAINS: Okay, very good. Thank you.

17 Mr. Shook?

18 MR. SHOOK: Thank you, sir.

19 EXAMINATION

20 BY MR. SHOOK:

21 Q. Mr. Smith, about how long this farmer was
22 stockpiling and spreading the chicken stuff, you know,
23 six months, eight months, two years?

24 A. No, he started in -- he started in '22. I

1 think it was '22. It was somewhere in there. And
2 that's the first time we noticed the pile. Wasn't sure
3 then what it was.

4 Q. Sure.

5 A. But he had bought ground south of 1800 --
6 south of 1800, and that's where he was -- he was
7 spreading it there, and then he took over a whole mile
8 section.

9 Can I look at the map right here?

10 MR. KAINS: Yes, sir, you may.

11 MR. SMITH: If I can find 130 on...

12 MR. KAINS: Keep -- keep your voice up,
13 Mr. Smith --

14 MR. SMITH: Okay.

15 MR. KAINS: -- so folks in the back can hear
16 you.

17 MR. SMITH: Well, if I can find 130. Here's
18 the Douglas/Coles County line right here, okay? My son
19 lives -- if you turn off of 130 -- off of 130 heading
20 towards the east, he is the very first house that's on
21 the left-hand side.

22 Along 130, there's a section of land there.
23 That is where the first wind turbine -- and I think it's
24 this one right here or this one right here -- because

1 this is 130 right here in this orange line. So, he's
2 gonna have this one, this one, and south, and this one
3 here, and I'm pretty sure right here. He's got, I
4 think, four or five, but I don't know what other land he
5 is cash renting. So, I can only -- I can only find the
6 land this guy bought.

7 So, Jared's gonna have four of these wind
8 turbines near his house because they've seen the wind
9 stakes out there where they put them in the ground. So,
10 I know where the wind turbines -- or where they're
11 marked. I don't know if that's exactly where they're
12 going, but that's where we're at.

13 BY MR. SHOOK:

14 Q. And he -- you live in the county, but he lives
15 across the street --

16 A. Basically --

17 (Speaking simultaneously.)

18 Q. -- yards and he don't live in the county, but
19 still --

20 A. That's right, he lives right on the other
21 side. That is why Douglas County was brought in on this
22 chicken farm thing or this chicken manure thing because
23 when -- and the court is in -- this case is in Douglas
24 County. The reason is it had to be in Douglas County,

1 that's where he resides. But when the farmer went down
2 to spread it, well, he was throwing it all over his
3 yard. So, not only did he do the whole field and the
4 field towards the -- the west of him or towards the east
5 of him, he did east of him, he did straight in front of
6 him, and he did the land on the other side on the west
7 side of 130 right there also. He couldn't go any
8 further back because that's Douglas County. So, the
9 court case is in Douglas County because it happened to
10 him and he lived in Douglas County.

11 It's -- yes, you're right. It's basically
12 just right across the street is -- you know.

13 Q. You and your son's property, what's the total
14 of the wind turbines going up in your area, for example,
15 500 yards --

16 A. I think --

17 Q. -- or something like that?

18 A. I didn't go out on the field, but the first
19 pipe near us, I think, is -- I forget what it was --
20 like 1,300 to 1,400 feet. I forget what it is. But I
21 can see -- I can see it.

22 And his is about the same. If you drive down
23 130, you can see his house and you can see the yellow --
24 or the white post right out there in the field.

1 Q. And that -- and how many around your little --

2 A. Well --

3 Q. -- little area?

4 A. -- there's six of them, I believe. Yes, you
5 got -- here's 130. His house is gonna be right here.
6 And then mine's right down in here. So, you got one,
7 two, three, four, five, six, seven -- about seven or
8 eight of them that's gonna be in that area.

9 MR. SHOOK: Okay. Thank you, Mr. Smith.

10 MR. SMITH: Yep.

11 MR. KAINS: Mr. Shook, thank you for your
12 questions.

13 Any other questions from members of the County
14 Board?

15 Members of units of local government,
16 including school districts?

17 Cross-examination, Mr. Hess, Ms. Antonioli?

18 MR. HESS: Mr. Smith, I'm really sorry about
19 your son. Thank you for your testimony. No further
20 questions.

21 MR. SMITH: That's fine.

22 MR. KAINS: Thank you, Mr. Hess.

23 I think everybody in this room feels the same
24 way. And -- and I also see Mrs. Smith back there. I

1 think everybody's very sorry for what has happened with
2 your -- with your son.

3 MR. SMITH: Can I just say one more thing?

4 MR. KAINS: Yes, absolutely, sir.

5 MR. SMITH: I'm not saying that things happen
6 and we can't stop it, but I am saying that -- that one
7 person's life is at risk is worth stopping something,
8 okay? I'm not blaming any of you, it's just bad
9 situations. And it's bad decisions, and that's what I
10 want you to understand. It is bad decisions that people
11 make. Because I can make all kinds of decisions that
12 don't affect my life that affect other people, okay?

13 But sometimes you got to draw the line and
14 say, "Hey, this just isn't worth it." Money's not worth
15 it. You're not gonna die and take it with you. You're
16 not gonna live some -- leave it and -- and it just stays
17 here. But somebody's life matters, and there's people
18 out there that struggle.

19 And one other thing: He -- it -- all this
20 medicine that people take, it causes mental issues. And
21 I just took him to the hospital, and he was in there for
22 almost a -- two weeks. Because when he called that
23 night, he didn't know if he wanted to continue living.
24 Do you know how hard that is?

1 And now he's got a medicine that works, but we
2 don't know for how long and we don't know -- the fungus
3 is starting to drop in his body, and hopefully it does,
4 so he can get off the medicine because that is a
5 horrible medicine to be on. Some of the medicine,
6 you're not even supposed to be on very long, and it's
7 all due to this.

8 It's not due to wind turbines. But if them
9 wind turbines are put up and the dirt and the soil is
10 all moved from farther underground or whatever and them
11 blades are turning and blowing that straight towards his
12 house from all different directions, just think about
13 it. All different directions.

14 And, yeah, you're right, when you put the wind
15 turbines up because the wind blows 40 or 50 mile an hour
16 all the time -- trust me, I hate it out there sometimes.
17 You're right, (indiscernible) off in them straight line
18 winds and fall over the power wire. But that is
19 constantly gonna blow towards his house with these wind
20 turbines.

21 MR. KAINS: Hang on, Mr. Smith. We still have
22 other groups of folks who may have questions.

23 Members of the public, who are in favor of the
24 application, with questions for Mr. Smith?

1 Anyone who is neutral -- oh, yes, ma'am. Come
2 on up to the microphone. Can you move the microphone
3 down just a little bit toward you? There you go. And
4 could you please state your name for the court reporter?

5 MS. CALLAWAY: Yes, my name is Kendra
6 Callaway, that's K-e-n-d-r-a, Callaway is C-a-l-l -- I'm
7 sorry -- C-a-l-l-a-w-a-y.

8 MR. KAINS: Okay, go ahead with your questions
9 for Mr. Smith.

10 MS. CALLAWAY: Okay, this is the first time
11 I'm doing this. I'm a little bit nervous.

12 MR. KAINS: It's okay.

13 MS. CALLAWAY: First of all, before I get
14 started with my questions, I do have to say, I am sorry
15 about your son.

16 MR. SMITH: Thanks.

17 MS. CALLAWAY: And my heart does go out to you.

18 MR. SMITH: All I ask is that people pray for
19 him.

20 MS. CALLAWAY: I was gonna say that next. I
21 pray for a lot of people, and I will definitely keep you
22 all in my prayers.

23 And I did sign a contract with Coles Wind. I
24 just have a few questions, and I won't take up the

1 Court's time. But I will sincerely pray, and I do wish
2 your family the best.

3 EXAMINATION

4 BY MS. CALLAWAY:

5 Q. I just want to know, with the histoplasmosis
6 and blastomycosis, is that -- am I correct on saying
7 that?

8 A. Yes.

9 Q. Okay. Was that Coles Wind who did that or --
10 excuse me -- was that -- that was another wind company,
11 is that right?

12 A. No, it wasn't any wind company.

13 Q. Oh, okay.

14 A. It was a farmer that spread manure all over
15 the ground.

16 Q. Okay.

17 A. And we're trying -- if -- if this lawsuit -- I
18 mean, if it goes through, nobody knows what happens.

19 Q. Uh-huh.

20 A. The only -- the only -- there's two ways to
21 get rid of this -- this fungus. For one, it has to sit
22 for over ten years -- 10 to 12 years --

23 Q. Uh-huh.

24 A. -- it has to sit dormant. The only other way

1 is you have to dig up so many feet -- so many feet down
2 and it all goes to Chicago to be burnt. And then you
3 have to bring that soil back and put it back where it
4 goes.

5 It's -- it wasn't -- it wasn't -- and I even
6 told them, it wasn't a wind turbine place. It's -- it's
7 in the soil. And anything that constantly blows this
8 soil or moves this soil, is pushing this fungus.

9 Q. Okay. Now, I don't know if you would know
10 this answer to the next question and it might be a Coles
11 Wind -- but I don't know -- but -- and I really don't
12 know. I've learned -- honestly, I've learned more
13 from -- about wind turbines in this court hearing than
14 I've ever known before. But do this -- does the wind --
15 Mr. Hess, you might know, does -- does Coles Wind test
16 the -- the soil before you put the wind turbines on?

17 MR. KAINS: Okay, Ms. Callaway --

18 MS. CALLAWAY: I don't know if that's -- if
19 that's something --

20 MR. KAINS: -- you need to be asking questions
21 of the witness --

22 MS. CALLAWAY: Okay.

23 MR. KAINS: -- not Mr. Hess.

24 BY MS. CALLAWAY:

1 Q. Do you know -- do you know or if...

2 A. They test -- they do test the soil, but I
3 don't know for what. I don't know if they test the --
4 the soil for funguses in the ground.

5 Q. Okay, yeah. I guess that's -- yeah. Like I
6 said, I didn't know who knew everything.

7 The other thing is, did you know that -- and
8 that two years, I think about two years ago, it could be
9 three, but that there was a hearing from the Coles
10 Wind -- or excuse me -- I'm sorry -- there was a hearing
11 that was held, I think it was like two years ago in
12 regards to the Coles Wind Project, I believe?

13 Connie, I think it was you --

14 MR. KAINS: No, you -- you need to ask him the
15 question.

16 MS. CALLAWAY: Okay.

17 MR. SMITH: Yeah, to answer your question, no,
18 I didn't know.

19 BY MS. CALLAWAY:

20 Q. Okay, yeah?

21 A. I -- I work all the time. I don't watch -- I
22 don't watch the news. I don't get the newspaper.

23 Q. Okay.

24 A. I guess I'm an unfriendly person, I don't

1 know.

2 (Audience members laughing.)

3 A. I -- I work -- I work five days a week.

4 Q. Yeah.

5 A. You know, I get up at 3:15 in the morning to
6 go -- get ready to go to work and I normally work till
7 5 o'clock.

8 MR. KAINS: Okay, Ms. Callaway, do you have
9 another question for Mr. Smith?

10 MS. CALLAWAY: Yes, I do.

11 MR. KAINS: Very good, go right ahead.

12 MS. CALLAWAY: Okay.

13 BY MS. CALLAWAY:

14 Q. You had made a comment about that we are like
15 paid not to talk to people about the project. And that
16 I just -- I wanted you -- how do I word this as a
17 question -- did you know that we can -- did you know
18 that we can talk to people about the project, but we
19 just can't talk about the amount of payment there is?
20 Did you know that?

21 A. No, I didn't know that.

22 Q. Okay, all right.

23 A. Are you -- I didn't know what you're allowed
24 to talk to about it at all.

1 Q. Yeah. Well, I...

2 MR. KAINS: Go ahead with a question.

3 MS. CALLAWAY: I know, it is so hard. Okay.

4 BY MS. CALLAWAY:

5 Q. And I -- oh -- and then -- oh, I think you had
6 said something about 700 feet from the house. Are you
7 aware that -- and I get it, I get it, that, you know --
8 your testimony, correct me if I'm wrong, is you
9 wanted -- you don't want the flashing lights, you don't
10 want all that goes along with it, but I think you said
11 like 700 feet and I do believe it's like a fourth of a
12 mile, were you aware of that?

13 A. I thought I said 1,400 or 1,500 feet.

14 Q. Okay. I -- I don't know --

15 A. But I wasn't sure.

16 Q. -- I could've been wrong. But, anyway...

17 Okay, next -- next question, save more time. Just a
18 second. Oh, you had made mention in your testimony that
19 all farmers are rich, all farmers are -- and don't need
20 the money. Are you aware there are people like my
21 all-timer mother that -- that actually does need the
22 money? Are you aware that -- that not all farmers and
23 all people are rich?

24 A. But that's not what I said.

1 Q. Oh, okay. Correct me, please.

2 A. What I said was I don't know a broke farmer.
3 And most of the farmers I do know of, which live around
4 me that I do know, all drive newer vehicles and have
5 newer tractors. But, no, for me, no, I do not know a
6 broke farmer. My father-in-law likes to act broke
7 but...

8 Q. (Laughs.) Okay. And -- and, although, I -- I
9 get it in the lines of "it's good to go to your neighbor
10 to let them know and everything," but are you aware that
11 there is actually no law, rule, or anything saying that
12 you have to let your neighbor know what you're doing and
13 contracts or anything that's be signed, it's actually --
14 you know, we don't have to all the way agree, but
15 it's -- it's a nice thing to do?

16 MR. KAINS: Are you aware of a law?

17 MR. SMITH: No.

18 MR. KAINS: Very good.

19 MS. CALLAWAY: All right. I won't try further
20 questions. Thank you very much. And, again, please,
21 just know we will be praying for your son.

22 MR. SMITH: Thanks.

23 MS. CALLAWAY: Thanks.

24 MR. KAINS: Thank -- thank you, Ms. Callaway.

1 Are there any other questions for Mr. Smith
2 from folks either in support of or neutral on the
3 application? All right, very good.

4 Questions from Coles County Staff and
5 Consultants, Mr. Lockhart?

6 MR. LOCKHART: No, sir.

7 MR. KAINS: Mr. Keyt?

8 MR. KEYT: No, sir.

9 MR. KAINS: All right, very good.

10 All right, final questions for the witness
11 come from members of the Planning and Development
12 Committee. All right, very good.

13 Mr. Smith, thank you for your testimony.

14 MR. SMITH: Thank you.

15 MR. KAINS: And I think everyone will echo
16 what Ms. Callaway said, lots of folks need to be praying
17 for you and your family and your son, especially.

18 MR. SMITH: I appreciate it, thank you.

19 MR. KAINS: Thank you.

20 All right, folks, it's 7:29. The Planning and
21 Development Committee of the Coles County Board will be
22 in recess until 7:45, at which time, we'll take up more
23 testimony from folks who are opposed. And we'll start
24 with Mr. Yoder, and then go to Mr. Conkrite [phonetic] --

1 Cronkhite, and then Mr. Sherman.

2 Thank you, we're in recess until 7:45.

3 (Recess.)

4 MR. KAINS: Okay, let's -- let's go back on
5 the record.

6 All right, public hearing reconvenes at
7 7:46 p.m., and we're going to go until 9 o'clock.
8 Earlier, we had hoped to go until we got done with all
9 of the testimony, but I looked at the radar and I think
10 everybody's gonna need to get home. It's gonna be
11 moving into Central Illinois somewhere around 10:30,
12 11 o'clock. And I know there's some people who have to
13 get to Peoria, Springfield, and other folks need to get
14 home and get indoors, not be driving small cars around
15 the countryside.

16 All right, continuing with testimony from
17 those the opposition.

18 Mr. Yoder, are you ready?

19 MR. YODER: Be as ready as I'll be.

20 MR. KAINS: Very good.

21 (Pause.)

22 MR. YODER: I'm not sure how long this will
23 reach.

24 MR. KAINS: What you wanting to do?

1 MR. YODER: I've got a couple pictures I want
2 to display as part of my...

3 MR. KAINS: All right, let's first -- first
4 show them to counsel here and counsel there.

5 MR. HESS: You want to go over there?

6 MR. KAINS: Yeah, why don't you -- Mr. Keyt,
7 clear some room?

8 MR. HESS: I'm just gonna turn the -- the
9 screen on.

10 MR. KAINS: Let's go off the record again,
11 Lydia.

12 (Discussion off the record.)

13 MR. KAINS: Okay, now we'll get back on the
14 record.

15 (Witness sworn.)

16 MR. KAINS: Very good. Go ahead and state
17 your name for the court reporter and spell the first and
18 last.

19 MR. YODER: All right, I'm Davon Yoder. Davon
20 is D-a-v-o-n, Yoder is Y-o-d-e-r.

21 MR. KAINS: What town do you live in, sir.

22 MR. YODER: Live out in the country, but
23 Charleston is my address.

24 MR. KAINS: Coles County?

1 MR. YODER: That's correct.

2 MR. KAINS: Very good. You'll have an hour,
3 if you so choose. Go right ahead.

4 DAVON YODER,
5 called as a witness, being first duly sworn,
6 was examined and testified as follows:

7 TESTIMONY

8 MR. YODER: All right. As mentioned, my name
9 is Davon Yoder. I live in Northern Coles County. I've
10 lived there for about six-and-a-half years. I live just
11 northwest of the proposed location for Turbine 35, if
12 you want to look at the map. It's roughly 2,000 feet
13 away, but the -- that's the closest one and there's
14 still approximately 12 locations within a mile-and-a-half
15 of our residence. Of those 12, there are six that are
16 within a mile from our home.

17 To say that our lives are gonna be impacted, I
18 think, is an understatement.

19 As I mentioned, about six-and-a-half years
20 ago, we purchased this home, which is pictured here.
21 When we purchased that, it did not include wind turbines
22 in our -- our skyline. We purchased it because it is a
23 quiet, open landscape. There's -- there's beautiful
24 sunsets. Obviously, it did not include wind turbines

1 that were over 600 feet tall on the horizon.

2 Regardless of what model is selected, the wind
3 turbines will drastically alter our view. And I did a
4 little -- a little research. I had mentioned,
5 previously, that I do have solar panels, which you can
6 see in the picture there. So, I've done a lot of
7 research on green energy. I'm not entirely opposed to
8 green energy. I like the idea of being self-sufficient.
9 If possible some day, I'd like to be off-grid, but
10 that's neither here nor there.

11 But I have used some of the available
12 resources online, one of them is a website called
13 SunCalc.org to calculate the shadow that it would
14 potentially give us here. And so the closest wind
15 turbine, T35, based on SunCalc.org, would give us
16 potentially 66 days where we would see the shadow
17 flicker in the morning. Obviously, the studies that
18 were shown give the average based on weather and
19 everything else, but it does not calculate or show the
20 worst case scenario, which is if every day it was sunny
21 in the morning. In this case, there's a potential for
22 66 days and that is just for the one turbine, as opposed
23 to just one.

24 There are two directly west of us that will

1 potentially cause more disturbance in the evening,
2 that's -- we enjoy our -- our time outside. And
3 evenings is generally the time that I get to be outside
4 when I'm at home, I'm not working.

5 So, there's also the -- the noise pollution
6 that would come with this turbine, specifically
7 Number 35, and obviously will include a lot more traffic
8 up and down our -- our quiet country road. Not only
9 specific during construction time, but also for the next
10 30 years during the regular maintenance and routine
11 checks.

12 So, as you can see here, I've got a couple of
13 aerial photographs to showcase some of the landscape
14 that will -- as it exists today. I have -- I do some
15 aerial photography on my -- my side job, I guess,
16 passion, I guess. And so, with that, I've -- I've used
17 a couple of pictures that I've taken personally, and
18 I've shown what they are today and then also examples of
19 what it would potentially look like with the wind
20 turbines in -- in the area. And so, I tried to use the
21 project map to map out approximately the locations and
22 roughly the size of the -- the wind turbines, even
23 though they're not the exact model.

24 So, if you would tab to the next image,

1 please.

2 So, this is facing east. And the closest one
3 is the one on the right there and that is, like I said,
4 approximately 2,000 feet away from our home. It is hard
5 to capture just how large 650 feet tall turbines are,
6 but that is roughly what we would see if we look to the
7 east from our residence once these are -- are built.
8 Obviously, this will -- will dominate the view that we
9 have.

10 And so if you want to tab to the next slide,
11 please.

12 This is -- it doesn't show up real well -- but
13 this is at the end of our driveway, our residence,
14 pointing west. As you can see, we do have beautiful
15 sunsets, even though there's not a whole lot else
16 besides fields, but we do enjoy our sunsets.

17 So, just tab to the next one, you can see
18 the -- this is looking to the west from our -- our
19 residence. As I mentioned, there's 12 within a
20 mile-and-a-half of our -- our home. This, again,
21 reflects, approximately, the locations and view that we
22 would see if these wind turbines are -- are built.

23 Along with this specific project, if -- if it
24 proceeds, we already have some of the impact from

1 neighboring wind projects that are -- are visible to us,
2 not related to Apex, but several have already alluded to
3 the Newman Wind Farm. It's approximately 15 miles away,
4 and from our backyard, when we're outside in the
5 evenings around the campfire, we will see those flashing
6 red lights 15 miles away, so I can't imagine how much
7 worse it's gonna be if we're living directly under them,
8 not to mention that the -- the turbines used here will
9 be much larger than the ones at Newman.

10 I think it's been mentioned numerous times,
11 but it's worth repeating, I guess: Each of these wind
12 turbines are taller than the St. Louis Arch. And I
13 think most of us have been there and know how -- how
14 tall that is, approximately, if we're standing
15 underneath that.

16 The application has estimated approximately
17 ten month's worth of construction, which as it was
18 mentioned by Apex witnesses, that will likely extend to
19 over a year if there's any sort of a delay, including
20 inclement weather or technical issues. Obviously, this
21 prolonged period will have a lot of heavy equipment,
22 concrete, gravel trucks, obviously, construction traffic
23 of the people that are working on the project on our
24 local roads. As a resident, I am concerned about the

1 increase of the dust, there will be rock chips, extra
2 traffic means the roads will get used a lot more,
3 destroying the roads during the construction process. I
4 understand they will be rebuilt, but during that process
5 there -- we have to travel those roads day in and day
6 out.

7 And I think our personal property, our
8 vehicles, are gonna be subject to a lot more abuse than
9 they would be if the wind project did not come in.
10 Obviously, that is going to affect their value. And so
11 while we talk about property values, our homes, there is
12 a study I just found. I don't think there's any studies
13 done on our vehicles that take the additional abuse, I
14 guess.

15 Obviously, during that construction phase, as
16 mentioned, we spend quite a bit of time outside in the
17 evenings, especially during the summer, and I can't
18 explain just how quiet it is. Summer evenings, sitting
19 outside, and knowing that that will potentially be
20 changed by a lot. Being able to sit around a campfire
21 on Friday evenings and listening to the birds, listening
22 to the -- the insects, all that will potentially change
23 when you have 12 turbines within a mile-and-a-half. And
24 that construction process, especially, you'll have the

1 noise of that going on seven days a week potentially and
2 into the late-night hours. We have a daughter who is
3 seven years old, and through the school year, that will
4 affect her ability to be able to sleep when there's a
5 lot of additional traffic. Not something that I think
6 is a good thing.

7 As mentioned, we bought our home approximately
8 seven years or six-and-a-half years ago. The wind
9 turbines were not apart of that decision-making process.
10 And now that I've lived here for almost seven years, I'm
11 now faced with a future where I have to either
12 potentially have my property value, if not diminished --
13 at least the amount of people that are wanting to buy a
14 home within a wind project is probably significantly
15 smaller than those that just want to live in the
16 country. I definitely would say that even if it's not
17 shown in a study, I think it is hard for me to imagine
18 that it would not affect the property value.

19 And to the members of the board, specifically,
20 if you were in the market for a new home, in the
21 country, with the exact same residence, available both
22 with or without a 650-foot-tall wind turbine,
23 approximately 200 -- I'm sorry -- 2,000 feet away, with
24 50 others nearby, would you choose the one that is with

1 the wind turbines or away from the wind turbines, where
2 you didn't have to potentially see that?

3 The rural character of Coles County is what
4 drew us here. We moved here from Moultrie County. And
5 we lived in Arthur. We enjoyed town for a little bit,
6 but we wanted the wide open spaces, that's why we moved
7 to the country. And when this home came for sale, we
8 loved it, we loved the view, and so we purchased that
9 because of the ability that we have to do what we want
10 to. We're living in the country. I don't know if
11 that's going to change necessarily with the project, but
12 there will be a lot more traffic, a lot more things that
13 we had not anticipated with -- when we bought this home.

14 A project of this scale changes the -- the
15 rural, quiet lifestyle that we've enjoyed this far. And
16 the project will significantly limit new construction
17 and development of businesses or residences. In order
18 to meet the requirements of the ordinance, we -- we've
19 seen all the different setback requirements and how
20 Coles Wind may have met those currently, but it also --
21 in the future, if new people come to the area, they are
22 gonna be restricted on being able to build depending on
23 their location to a -- a wind turbine.

24 As I mentioned, I'm not entirely opposed to

1 renewable energy. I have a wind turbine -- or solar
2 panels on my property, but I am opposed to sacrificing
3 the quality of daily life and personal property value in
4 exchange for a potential economic benefit for the select
5 few that's been mentioned here. It was also mentioned
6 that, I believe it was last Monday, we did go to the
7 Piatt County Apex Project there and did a -- a brief
8 tour. It was storming or about to storm when we got
9 there, so didn't have a whole lot of time, but I will
10 also mention, I don't know that I can point to that it
11 was a wind turbine issue specifically, but both my wife
12 and I noticed that we did get headaches before we left
13 there. It's worth mentioning. I don't -- I mean, I
14 don't have a study or thing to point to that says that's
15 where it came from, but that -- that was our personal
16 experience after we were up there.

17 To the board, I would say as an upstanding,
18 law-abiding, tax-paying citizen of Coles County, I would
19 respectfully urge you to consider the long-term
20 consequences this project could have on the families,
21 like ours, and I would ask that you would deny this
22 Special Use Permit.

23 MR. KAINS: Thank you, Mr. Yoder.

24 Members of the committee, questions for

1 Mr. Yoder?

2 Yes, Chairman Watts?

3 EXAMINATION

4 BY MR. WATTS:

5 Q. Regarding -- thank you for your testimony.
6 Regarding the -- I guess the computer program that you
7 used that would show that T35 would get 66 days of
8 shadow flicker --

9 A. Correct.

10 Q. -- did that translate into hours?

11 A. I did not go through and calculate the
12 specific hours, but it would show the exact time of day
13 based on your location, the elevation of the -- the
14 object that you're trying to place within that area, and
15 then it should show the amount of time and based on the
16 I believe it's Google Maps reference, it would show how
17 much time it would land on that building or in that area
18 specifically.

19 Q. Okay. And then, also, regarding the Newman
20 Wind Farm --

21 MR. KAINS: Chairman, could you use the
22 microphone, please.

23 MR. WATTS: Oh, sorry.

24 BY MR. WATTS:

1 Q. Regarding the Newman Project, you say you see
2 the red flashing lights?

3 A. Correct.

4 Q. Do you know if that's the same lighting system
5 that's going to be used for the Apex Project in terms
6 of, I guess, it's to warn aviation of the turbine's
7 presence?

8 A. Right, so the -- I believe the red flashing
9 lights are required by the FAA, and I don't know if they
10 have the same tower, but I know their lights are
11 required for the wind turbines.

12 Q. Well, why'd you say the one that Apex is
13 proposing they only -- they only become active when they
14 need to warn flights that are close by, do you know if
15 that's the case with...

16 A. That -- that was my understanding, but the
17 first, I think, three to six months, I believe the
18 lights will be on constantly until that is tested and
19 verified.

20 MR. WATTS: (Indiscernible) testing, sure.
21 Yeah. Okay, thank you.

22 MR. KAINS: Thank you, Mr. Chairman.

23 Any other questions from members of the
24 Planning and Development Committee? Very good.

1 Other County Board members -- questions?

2 Yes, Mr. Johnson?

3 EXAMINATION

4 BY MR. JOHNSON:

5 Q. Mr. Yoder, you'd made the comment that your
6 study showed you were gonna get 60 days?

7 A. 66 days.

8 Q. Okay. How many hours each of those days were
9 you gonna see the shadow flicker?

10 A. It was approximately -- I was just gonna start
11 with very minimal, and then as the time goes through, I
12 believe it's approximately 27 minutes per day, I think,
13 is the longest potential.

14 Q. Okay. I know you -- young family -- do you
15 work from home or do you work out of the home?

16 A. I work out of the home, though, I will mention
17 through COVID, I was working from home for about a year.

18 Q. And does your wife stay home with the --

19 A. My wife is a stay-at-home mom and takes our
20 daughter to school every day. So, it's not like she's
21 grabbing the bus and just going. She -- she personally
22 drives her to school close to Arcola.

23 Q. Okay, so all your children are school-age
24 and --

1 A. We -- we only have one daughter, yes.

2 MR. JOHNSON: Okay. All right, thank you.

3 That's all I had.

4 MR. KAINS: Thank you, Mr. Johnson.

5 Any other questions from members of the County
6 Board?

7 Mr. Shook?

8 MR. SHOOK: Thank you.

9 EXAMINATION

10 BY MR. SHOOK:

11 Q. You might have not said this and maybe I
12 didn't hear it right, do you have solar powers [sic] on
13 your property?

14 A. I do have solar panels on our property,
15 correct.

16 Q. Okay. Well, what -- what makes you have the
17 right to have that and these other folks who want to put
18 the wind turbines up? I mean, they're doing it with
19 energy and you're doing it with energy. And you're
20 getting -- and you're getting cheaper energy for it, so
21 who are you to question whoever that wants to put the
22 turbines up on their property 'cause you're putting what
23 you got on your property.

24 A. That's correct. So, my question in return is

1 how many of these farmers that own the land, how many of
2 them requested to have wind turbines on their property?
3 This was -- this was proposed to them and, in return,
4 they agreed to the funds. If it was just a -- a project
5 that they wanted to borrow the land or buy an acre of
6 land, I don't think they would've just sold it at fair
7 market value for one project. This -- the solar panels
8 for myself, as mentioned, I -- I would like to someday
9 be off-grid potentially, but that's for my own benefit.
10 I -- I -- I benefit. No one else has to be affected by
11 that.

12 Q. But you're saving money, though?

13 A. I am saving money by producing my own energy,
14 and it's my energy that's being -- I'm producing it.
15 I'm using it. The wind farm, the energy does not stay
16 just to the local community, it goes wherever the energy
17 is needed.

18 Q. But it's okay if you do it, but they can't?

19 A. I'm -- I'm proposing that what -- what they're
20 doing is not exclusively for Coles County. What I'm
21 doing is for my own personal benefit, and it doesn't
22 affect my neighbor.

23 MR. SHOOK: I'm done.

24 MR. KAINS: Very good. Thank you, Mr. Shook.

1 Any other questions from members of the County
2 Board?

3 MR. BENNETT: Well, real quick, one question.

4 MR. KAINS: Yes, Mr. Bennett?

5 MR. BENNETT: Thank you.

6 EXAMINATION

7 BY MR. BENNETT:

8 Q. Just to clarify that your solar panels are not
9 obstructing anybody's view?

10 A. That's correct, there's -- there's no
11 obstruction to anyone's else view. I actually have a
12 windbreak tree arrangement, basically around the north
13 and west side of our property, which is basically the
14 only way you can see the -- the panels, so.

15 MR. BENNETT: Thank you.

16 MR. KAINS: Any other questions?

17 Mr. Shook?

18 CONTINUED EXAMINATION

19 BY MR. SHOOK:

20 Q. Everybody's been saying this is coming down to
21 money. The farmers are getting paid. They're making
22 money. You're making money, save on electricity,
23 your -- your cheaper bills and stuff?

24 A. That's -- that's actually incorrect, I'm not

1 making money by -- by having this, I'm --

2 Q. But you're saving money?

3 A. -- I'm saving money --

4 Q. Well --

5 A. -- because I purchased these panels. I paid
6 to have them installed.

7 Q. But money's involved, right?

8 A. That's correct.

9 Q. Either way you look at it, money's involved?

10 A. It's my money.

11 Q. You're saving your money?

12 A. That's correct. Being a steward -- a good
13 steward I -- I hope is what I'm trying to do here.

14 MR. SHOOK: I'm done.

15 MR. KAINS: Thank you, Mr. Shook.

16 Any other questions from members of the County
17 Board?

18 Members of units of local government,
19 including school districts?

20 Cross-examination, Mr. Hess, Ms. Antonioli?

21 Ah, Ms. Lode?

22 MS. LODE: Yeah, just briefly.

23 EXAMINATION

24 BY MS. LODE:

1 Q. Mr. Yoder, thank you for your testimony. I
2 just have a couple clarification questions. Were you
3 here on the evening Jason Conley, our occupational
4 safety expert, spoke?

5 A. I believe so. I'm -- it's been a while.

6 Q. So, do you recall him testifying about the
7 Aircraft-Detecting Lighting System?

8 A. I do, yeah, I do remember that part, correct.

9 Q. So, as you indicated in your testimony, for
10 the first three to six months, we'll have to test that
11 system, correct?

12 A. Uh-huh, correct.

13 Q. Following that, the lights on top of these
14 towers will only be on when a plane is within three
15 nautical miles, do you remember him testifying to that?

16 A. I do remember that, correct.

17 Q. So, for the life of the project, the blinking
18 lights will not be on the majority of the time, correct?

19 A. I can't speak to that specifically. I --
20 we -- another point I would make is that we have
21 constant -- I say "constant" -- fairly regular
22 helicopter traffic from the -- it's generally the Air
23 Evac traveling north and -- sorry -- yeah, north and
24 south direction, and so to routinely see that concerns

1 me a little bit. And that's typically -- I'm home at
2 night, and that's when I see it. I -- I would notice
3 that, so.

4 Q. Were you here on the evening that Brie
5 Anderson testified? That would be the second night of
6 hearing, March 19th.

7 A. I believe so.

8 Q. Do you recall a question about that
9 helicopter -- helicopter path?

10 A. I -- I recall someone asking something about
11 that.

12 Q. And do you recall Ms. Anderson saying that
13 that path and those folks that fly that medical path
14 were consulted when fighting the turbines?

15 A. I don't remember the specific answer, but I
16 remember the question.

17 Q. Just a few more clarification questions. Were
18 you here on the night Mr. Adam Carlson, our project
19 construction expert, testified?

20 A. I was.

21 Q. And do you recall him testifying that we'll
22 need to enter into a Road Use Agreement with every
23 township, every road district, and county where we
24 impact the roads?

1 A. Yes.

2 Q. And it's those Road Use Agreements will cover
3 pre-maintenance prior to bringing in heavy vehicles,
4 maintenance during construction, and maintenance
5 following construction?

6 A. I -- as I understood, their agreement still
7 has to be finalized yet, so I don't know specifically
8 what that looks like.

9 MS. LODE: Okay, no further questions.
10 Thank you.

11 MR. KAINS: Thank you, Ms. Lode.

12 All right, questions from Coles County Staff
13 and Consultants, Mr. Lockhart?

14 MR. LOCKHART: No, sir.

15 MR. KAINS: Okay. Mr. Keyt?

16 MR. KEYT: No, sir.

17 MR. KAINS: All right, very good.

18 Members of the public, folks in support of or
19 neutral on the application with questions for Mr. Yoder?
20 Very good. Thank you.

21 MS. ROGERS: Can -- can we ask questions,
22 opposed, that clarify things that were asked? Can we
23 ask --

24 MR. KAINS: No, ma'am. That's called --

1 MS. ROGERS: But it's --

2 MR. KAINS: -- bolstering and that's not
3 proper cross-examination, but thank you for asking.

4 All right, and final questions for the witness
5 come from members of the committee. Okay, very good.

6 Mr. Yoder, thank you. You may step down.

7 Tina Green. Is Ms. Green -- there she is.

8 And, Mr. Sherman, about how long do you think
9 your presentation might go?

10 MR. SHERMAN: At least an hour or over an
11 hour.

12 MR. KAINS: I was going to say, you only get
13 an hour, but... Okay.

14 MR. SHERMAN: And I'm not kidding. I have 52
15 points.

16 MR. KAINS: No, that -- that's wonderful. I
17 was expecting that. Maybe we'll have Mr. Shaw could
18 go -- or Ms. Winslow or Mr. Shaw could go next.

19 All right, Ms. Green, could you please raise
20 your right hand to be sworn.

21 (Witness sworn.)

22 MR. KAINS: You do, very good. Okay, use the
23 microphone right in front of you. Go right ahead.

24 TINA GREEN,

1 called as a witness, being first duly sworn,
2 was examined and testified as follows:

3 TESTIMONY

4 MS. GREEN: Well, I don't have a slideshow,
5 but I have a picture that ironically I won a photo
6 contest with Coles-Moultrie Electric. And this is my
7 backyard.

8 You're probably familiar, Sheriff, yeah.

9 Anyway, very proud of my backyard. And I just
10 wanted to point out, I've lived up --this belonged to
11 my in-laws. It was part of my husband's grandfather's
12 farm.

13 MR. KAINS: Could you please sit down and use
14 the microphone?

15 MS. GREEN: Oh, yes.

16 MR. KAINS: Thank you.

17 MS. GREEN: Anyway, I'm going to read this
18 because as you can see, I'm very nervous.

19 MR. KAINS: It's all okay, Ms. Green. I think
20 we're all -- by this point, we're probably all friends,
21 whether we want to be or not. So, go right ahead.

22 MS. GREEN: I hope so. Well, 12 years ago, in
23 2013, we returned to Charleston after living in
24 Plainfield, Illinois, 35 years, during our careers in

1 Naperville, Illinois. We were fortunate to buy back my
2 in-laws' home in rural Charleston, but unfortunate for
3 us, we live in Morgan Township, where some of the wind
4 turbines are being planned to go up. We are across the
5 field from -- maybe I'm not supposed to say his name, so
6 I won't -- where this 643-foot wind turbine will be
7 towering over our pine trees that line our front yard.

8 We were also fortunate to buy acreage across
9 the road that was once apart of my husband's
10 grandparents' farm. That typically doesn't happen.

11 In other words, we returned home to spend a
12 quiet, golden retirement away from traffic and concrete
13 on the Clark Farmstead. To the point, your specialty
14 experts over the past meetings have claimed there are no
15 negative impacts of the wind turbines.

16 I need a breath.

17 I've been told that I have a beautiful
18 property, but who is going to want to live there staring
19 at a 643-foot wind turbine from my front porch, where I
20 could actually enjoy seeing bald eagles and gold eagles
21 lying in our fields? Environmentalists say, "There's no
22 negative impact to these majestic birds and any birds
23 that come near them." I have strong doubts for their
24 safety. The specialists say there's no negative impact

1 on pouring concrete into farmland and the residuals of
2 the oil leaking down into the soil. Again, I have
3 reservations on that (indiscernible) to our health along
4 with vibrations these massive turbines put off.

5 The specialists say the turbines have no
6 negative impact to the Doppler radar, affecting our
7 tornado warnings. The confident, trained meteorologists
8 say the wind turbines scramble the signals, blocking
9 accurate weather readings.

10 I mentioned we moved from Plainfield to our
11 present home 12 years ago. But while living in
12 Plainfield, 35 years ago, on August 28th, 1990, was the
13 worst recorded tornado, an F5 with over 300 mile per
14 hour winds. You would probably like that. It sent --
15 killed 29 people and injuring 350 people, including our
16 biology teacher at the Plainfield High School. His
17 wife, Ruth Hunt, fought to get Doppler radar in this
18 very state when she lost her husband because there was
19 no warning as that storm came out of DeKalb, destroying
20 everything in its path as it exploded in microbursts.

21 Now, again, I fear I will have no warnings, as
22 a Doppler radar would be compromised, I believe. And
23 even if it isn't compromised, but I believe it does
24 scramble it, that even if one life would be taken

1 because there was no warning, that's one too many. I
2 wonder how many Apex developers -- and I just -- and I
3 don't mean this insincerely, but I just wonder how many
4 would live in these conditions? One of your specialists
5 said he probably wouldn't when he was recently
6 questioned in these meetings.

7 Finally, all I can say is, God help us to keep
8 our farmland for its true purpose of producing crops and
9 not sending electricity to our eastern states all under
10 the great terminology of no negative impacts to the land
11 or people living nearby. That's all I can say.

12 MR. KAINS: Very good. Thank you for your
13 testimony, Ms. Green.

14 Questions for Ms. Green from members of the
15 Committee?

16 County Board?

17 MR. BENNETT: Yes.

18 MR. KAINS: Yes, Mr. Bennett?

19 MR. BENNETT: Bob Bennett.

20 EXAMINATION

21 BY MR. BENNETT:

22 Q. What is the distance that this wind turbine
23 will be to your property you're gonna see at your back
24 porch?

1 A. It will be about a quarter of a mile. I mean,
2 it's right across the field from me.

3 Q. That's my only question, thank you.

4 A. And I have pretty tall pines, but I don't
5 think they can block it.

6 MR. KAINS: All right, any other questions
7 from members of the county -- yes, Mr. Shook?

8 EXAMINATION

9 BY MR. SHOOK:

10 Q. And how many turbines will be close to you?

11 A. Well, one for sure and that's one too many.
12 That's one too many. I came back here to retire, and I
13 never dreamed this would --

14 Q. Who --

15 (Pause.)

16 A. Go ahead, I'm sorry. What, I've got you
17 pausing.

18 Q. These -- these farmers that are gonna be doing
19 this, it's their property, they pay taxes just like you.

20 A. Yeah.

21 Q. And, sure, they're gonna make some money on it
22 and all that, but it's their property.

23 A. Oh, excuse me.

24 Q. Do you think -- do you think you have the

1 right to tell whoever not to do it?

2 A. I kind of because they're not gonna look at
3 it. They're -- they're in town or they're south of
4 town. They're not gonna be looking at it.

5 Q. It's still their property.

6 A. Okay, so -- so we are forced to accept that,
7 is that what you're saying?

8 Q. I'm saying it's their property. They pay
9 taxes. They're not killing nobody or anything like
10 that. So, I understand that there's a lot of problem
11 with it.

12 A. What is if there is -- what if it is true and
13 this Doppler radar, which this woman fought to get for
14 this state and her husband died because there was no
15 Doppler -- well, we have Doppler radar now, but these
16 things are -- supposedly do scramble it. And even if it
17 doesn't, I mean -- I mean, that's what we rely on. I
18 have an app on my phone that tells me.

19 In fact, I had from the National Weather
20 Service the other day -- I have to say this -- in the
21 bad storm, there was storms coming, seven -- this was on
22 a Friday night. I was cleaning my neighbor's house, got
23 home, and I got this on my phone, alert, a bad
24 thunderstorm was coming seven miles northeast of town in

1 Charleston. That's exactly where I live, where hail,
2 and da, da, da, da -- well, am I gonna get that kind of
3 information that fast if there is a bad storm coming
4 and -- and -- and possibly these turbines could affect
5 that? I don't know.

6 MR. SHOOK: I don't -- I don't have anymore.

7 MR. KAINS: Okay. Any other questions from
8 members of the County Board?

9 From members of units of local government,
10 including school districts?

11 Cross-examination, counsel?

12 MR. HESS: Thank you, Mr. Kains.

13 EXAMINATION

14 BY MR. HESS:

15 Q. Ms. Green, thank you for your testimony. I
16 will keep this very brief. You do understand that the
17 Federal Government has looked at this particular project
18 and concluded no reviewing agencies, that would include
19 the Weather Service, had concerns with turbine
20 construction in the investigated field area?

21 A. No, but I don't understand why on our local --
22 why the meteorologists are telling us this, that's
23 putting that kind of fear about these wind turbines that
24 they could scramble the Doppler radar. Why do they do

1 that, if it's not solved?

2 MR. HESS: Thank you, Ms. Green. I have no
3 further questions. Thank you for your testimony.

4 MR. KAINS: Thank you, Mr. Hess.

5 All right, members of the public, folks in
6 favor of the application or neutral. Very good. Thank
7 you.

8 Questions from Coles County Staff and
9 Consultants, Mr. Lockhart?

10 MR. LOCKHART: No, sir.

11 MR. KAINS: Mr. Keyt?

12 MR. KEYT: No, sir.

13 MR. KAINS: All right, very good.

14 All right, final questions come from members
15 of the committee for Ms. Green. Very good, thank you.

16 Ms. Green, thank you for your testimony.

17 MS. GREEN: Thank you.

18 MR. KAINS: You may step down.

19 All right, I had two folks during the break
20 ask to testify. Ms. Winslow, Mr. Shaw, which one of you
21 wants to go next?

22 (Pause.)

23 MS. WINSLOW: I've been elected, I guess.

24 MR. KAINS: Ms. Winslow? All right.

1 (Pause.)

2 MR. KAINS: Come right up here.

3 (Witness sworn.)

4 MR. KAINS: Very good, thank you. And you are
5 Connie Winslow?

6 MS. WINSLOW: Yes, sir.

7 MR. KAINS: Can you spell you last name for
8 the court reporter?

9 MS. WINSLOW: W-i-n-s-l-o-w.

10 MR. KAINS: Okay. And what county do you
11 live in?

12 MS. WINSLOW: Coles County.

13 MR. KAINS: Okay, very good. Go right ahead,
14 Ms. Winslow.

15 CONNIE WINSLOW,
16 called as a witness, being first duly sworn,
17 was examined and testified as follows:

18 TESTIMONY

19 MS. WINSLOW: Yes, I live in Coles County. I
20 opted -- well, my mother did before she passed away not
21 to have turbines. And I know most of the people here
22 that have been speaking because they're my neighbors one
23 to three miles away. And I've known little Jerry Smith
24 since he was probably six years old and used to come

1 through the doggie door for fun going back and forth,
2 and now his little children can do that.

3 But, anyway, I want to thank the board members
4 and -- for the freedom and opportunity for us to explain
5 why we opposed the wind turbines. I hope the
6 information and feelings that are being presented here
7 tonight will give you a better understanding of how the
8 wind turbines can adversely affect the daily lives of
9 the surrounding residences, their pets, the wildlife,
10 the neighboring farmland, and even could change some of
11 the weather patterns.

12 I am the third generation to own and manage
13 the family farm. The two-story, 150-year-old farm home
14 that I'm starting to fix up was purchased by my
15 grandfather. He and my grandmother had moved from
16 Indiana to Nebraska and had purchased farmland through
17 the Government Homestead Act. She learned to become a
18 very good wheat farmer. They lived there a few years,
19 and then because of different factors, Grandpa decided
20 to move. The Dust Bowl was headed up there, the
21 Depression had just started, and probably the biggest
22 factor that helped Grandpa decide to move was Grandma.
23 She was a young married woman, she did not like the
24 extreme hard cold winter, the hot summers, the wind

1 blowing dirt in her little three-room home -- three-room
2 home whenever she had her windows open, and no other
3 farm women to talk to or general stores for many, many
4 miles that could only be reached by horse. So, they
5 headed for Illinois.

6 What became the Winslow Farm, 130 acres, was
7 up for sale because of the Depression. They lived in a
8 two-room little cabin in the corner of the yard while
9 Grandpa fixed up the two-story farm -- farmhouse for
10 them to move into. My father, Raymond, was born in the
11 farmhouse and two years later, my Uncle Wayne was born
12 in the farmhouse. Grandpa and the farm neighbor men
13 helped him build the barn, the grainery, the corn crib,
14 the chicken house, the rabbit house over several years.

15 They had been farming with horses, and when
16 Dad was a teenager, his dad finally bought their very
17 first new tractor, a Farmall H. Later, he bought a new
18 Farmall Super M, and my dad and Uncle Wayne were
19 delighted. It was a great addition to the farm for
20 field work and helping with the livestock.

21 My grandpa had a heart event bringing in the
22 cattle in the back forty one evening. My father was
23 working in the barn and wondered why his father was not
24 anywhere to be seen and the livestock were still out in

1 the pasture. He went out and found him gone, laying in
2 the grassy lane. Dad, being the oldest at 20, was now
3 in charge of the farmland and the animals.

4 He was drafted into the army. After his time
5 was done, he then moved back to the farm where he loved
6 and enjoyed working. His mother remarried and moved to
7 her new husband's farm. His brother was then drafted,
8 and Dad decided he wanted to buy the farm from his
9 mother and his brother so that he could continue to live
10 there.

11 He started dating my mother from Arcola. So,
12 after four years and his return from the army, they
13 married. Mom moved into the Winslow Farmhouse. They
14 both loved the farm and loved the Lord. They brought us
15 up that it was a privilege and we were the caretakers of
16 God's land and all his animals. Adam and Eve were the
17 very first family farmers. My parents told us that it
18 doesn't matter what the neighbors, your friends, or
19 relatives think. The only person we have to please and
20 to answer to is God.

21 In 2012, they were honored with the Coles
22 County Conservation of the Year Award. Dad was always
23 planting trees and evergreens. I grew up amongst pigs,
24 chickens, cats, dogs, and the occasional strays that he

1 always adopted and cared for. We had ten acres of
2 clover he rotated every few years around the farm. He
3 had beehives that would produce delicious honey. He
4 would turn the clover over after a few years and the
5 soil had come to life again. It was mellow and crumbled
6 easy.

7 When we had livestock, the manure was spread
8 across the field as natural fertilizer. I got my first
9 driving lesson at six on the Farmall H. I was riding on
10 the tractor sharing a seat with Dad, holding on to the
11 frame. The manure spreader had stopped. He said, "You
12 hold the big wheel, and I'll go back and work on the
13 spreader. You just keep driving forward toward the
14 treeline." I was scared to death, but loving it at the
15 same time. When we got to the end, he said, "Now, grab
16 the steering wheel knob and keep turning." So, I got us
17 turned around and drove it to the other end. Later, Mom
18 found out. She was mad. She said I could've been
19 killed. He said, "Well, she just did fine." And went
20 back outside and worked.

21 This farm has had a lot of hard workers, good
22 care, conservation improvement, and even though some
23 lean times they thought they could barely hang on to the
24 property, they made it. Neither my parents or

1 grandparents went on fancy trips, brought -- bought
2 expensive vehicles, or spent a lot of money on the
3 latest things for the house or the farm. They bought
4 the best they could afford and then took care of it.
5 Dad went to many a farm sales and bought the best used
6 equipment he could find.

7 I was blessed to be taught how to care for
8 animals and wildlife. I have a variety of birds,
9 squirrels, rabbits in my big yard. The field border
10 have deer, quail, pheasants, eagles, butterflies, bees,
11 and other wildlife. It is very peaceful to be out there
12 working in the yard or working in my field borders.
13 Just the sound of nature and an occasional vehicle or
14 farm implement going by is all I have to hear. It's
15 just the perfect location. I'm only three miles from
16 the highway and only a few miles from our local post
17 office in Hindsboro.

18 My parents and grandparents said they never
19 wanted to have wind turbines or any of the so-called
20 green energy machines on their property. They said they
21 believed in the long-run, they did not do what they
22 claimed, and they would do for the land -- and they
23 would not do for the land -- for the owner -- the owner
24 or the community what was promised. They said they were

1 just like a used cars salesman. They are telling you
2 what they need to tell you in order for you to sign
3 their contract. They said this is not an improvement to
4 the land. My parents promised each other and I promised
5 them I would not allow anyone to build wind turbines or
6 any other machines or put any other large equipment on
7 the land.

8 When the Embarras Area Water District wanted
9 to -- to put the local water tank on our property, my
10 father said no. So, it went on the farmer -- he decided
11 to purchase it, let them put it on his land north of us.
12 Since then, we've had trouble with the AM radio and the
13 TV channels have never been quite right since they
14 installed the water tower. The Coles-Moultrie Electric
15 checked it and it's nothing to do with electric lines,
16 but it's all to do with the power and the maintenance
17 building that needs several filters, that for some
18 reason, despite complaints, the Embarras Area Water
19 District has not installed any filters.

20 Therefore, we are kind of bitter because
21 something's been forced upon us and has affected our
22 lives that wasn't affected before that was put there.
23 We also agree to -- we also agree that putting any
24 machines on property that can -- might affect your

1 neighbors, your children, their grandchildren, their
2 pets, and all form of wildlife is probably not good.

3 We cannot live with ourselves because of our
4 desire for just a little bit more money when we are
5 negatively affecting our neighbors. That is what a good
6 neighbor does. It is an unwritten agreement. It is a
7 concern for the physical and mental health of your
8 neighbor and your friends. They should not have to put
9 up with the construction, the huge visual sight, the
10 constant noise, the effects from infrasound, the EMF,
11 electromagnetic field, given off from the large
12 electrical cables under the ground, the possible
13 interference with your cell phone, your television
14 signal, and radio reception.

15 I personally couldn't sleep at night, myself,
16 if I thought I had somehow affected my neighbor's sleep,
17 caused ringing in their ears, dizziness, headaches, and
18 any possible health effects that could happen. And what
19 if it affected their health enough that they had to move
20 away? Then, I've lost a good neighbor and a friend.

21 We all chose to live out here. Several who
22 live out here in our rural community have or are in the
23 process of fixing up their residence, just like I am.
24 Making improvements. An improvement does not include

1 installing over 600-foot-tall turbines. We like the
2 sunrise and the sunsets the way they are now --
3 beautiful, colorful on the horizon. No turbines are
4 blocking our view. No turbine noise of whooshing,
5 roaring, or banging. No shadow flickering in the fields
6 or the yards. It is quiet, other than the wind rustling
7 through the trees. We aren't forced to listen to the
8 maximum noise level all day and all night from these
9 wind turbines. No birds, bats, or insects are in harm's
10 way. At this time, they have the freedom and the safe
11 passage to fly there they want. They don't have to
12 worry about paying attention to how close they are to a
13 blade that will throw them to their death or cut their
14 body parts off.

15 A turbine has low pressure areas near the tip
16 of the blades. The air in a bat's lungs is at a higher
17 pressure. And as the bat is flying near the turbine,
18 their pressure difference causes the bat's lungs to
19 expand and can rupture tiny blood vessels around their
20 lungs as they get close to it. Therefore, this makes
21 their lungs explode, killing them.

22 The turbines do not make sense to me. They
23 can cause too much harm and health issues. With eight
24 turbines projected just west of my farm to be built

1 within a small area, there surely will be some side
2 effects. You can't have the -- that many grouped
3 together and not cause some kind of problems. There
4 will be effects like ground warming, drying out the soil
5 for a few miles, removing energy from the natural wind
6 pattern, which will all have an impact on the overall
7 weather in our area.

8 The people who live out here in a rural
9 community were here first. None of the residents around
10 my area want the turbines. We don't get to vote, other
11 than to express our feelings in opposition and pray our
12 representatives on the board hear our pleas to say,
13 "No." Too much is at stake. We should have the freedom
14 to live out here and see the amber waves of the grain
15 and not big white turbines in our visual or hearing
16 sight.

17 There is one landowner that has been very
18 considerate of our neighbors -- that was First Mid Ag
19 Services back in 2021. They sent our family the -- and
20 surrounding landowners the letter. I'll read a portion
21 of it. They say --

22 MR. KAINS: Ma'am, what is this letter?

23 MS. WINSLOW: This is a letter from First Mid
24 Ag to my mother regarding the Eastern Illinois

1 University Foundation Brainard and Daughtery Farms,
2 Coles County Wind Farm, Apex Clean Energy.

3 MR. KAINS: What's the date on the letter?

4 MS. WINSLOW: January 19th, 2021.

5 MR. KAINS: Okay. Just a portion of it, right?

6 MS. WINSLOW: Yes.

7 MR. KAINS: Okay, very good.

8 MS. WINSLOW: It's explaining, "As you know,
9 Apex Energy is in the beginning stages of developing a
10 wind energy project in Northern Coles County, north of
11 Charleston. Apex has been seeking wind energy leases
12 from property owners with farmland located within their
13 project.

14 I oversee Eastern Illinois University
15 Foundation Farms located throughout Central Illinois.
16 The foundation has two farms, being the Brainard,
17 Daughtery Farms that are located in the Apex project.
18 Apex is interested in leasing both farms for the wind
19 energy."

20 And for their reference, they include the -- a
21 map and the location of the two farms.

22 "I am seeking, as the Foundation Manager,
23 input of all property owners within a one mile radius of
24 these farms so that we might understand the prospective

1 of the project within the community. Please indicate
2 your opinion of the wind project by marking one of the
3 options below, which is support, oppose, or undecided.
4 Please return this letter to me in the enclosed envelope
5 at your convenience. Call me with any questions."

6 That was in January. We sent back the letter
7 and enclosed a letter stating our oppositions and why.
8 And June 21st, 2021, they sent a -- a new letter. It
9 says, "As you remember, Apex Energy has been working
10 with landowners in Coles County to potentially develop a
11 wind farm over in Charleston. Reminder, that I am an
12 overseer of the Eastern Illinois University Foundation
13 Farms located throughout Central Illinois. The two
14 farms were the Brainard and Daughtery Farms, located
15 within the project. Apex is interested in leasing both
16 farms for the wind energy project."

17 The last paragraph says, "In a previous
18 letter, the Foundation sought input of all property
19 owners within a mile radius of these farms, so that we
20 might understand prospective of the projects within the
21 community. After receiving many responses and
22 considering numerous other factors, the EIU Foundation
23 Board had decided that the Brainard/Daughtery Farms will
24 not be participating in the wind project. The

1 Foundation thanks each of you that responded to our
2 initial letter. If you have any more concerns, give me
3 a call."

4 I consider that a very good neighbor because
5 they wanted to know what the surrounding landowners'
6 opinions were. And I appreciated that apparently they
7 had a lot of opposition and they decided not to go with
8 the project. And I wanted to share that was my thought
9 of a good neighborhood, and I was pleasantly surprised
10 since it was a bank that they didn't just go for the
11 money.

12 Some of the residents in the area are worried
13 if they're going to be forced to leave because of health
14 of their family and their property value will be
15 lowered. I've had two real estate agents tell me that
16 resident's property will probably not be quite as
17 valuable with turbines around them as it would be if
18 there were not turbines.

19 If Apex or the leaseholders believed nearby
20 property values will not be hurt by the presence of a
21 wind turbine, then they should have no problem with
22 ensuring neighbors with a Property Value Guarantee, a
23 PVG.

24 Most of you that live in town have chose to

1 live in the location where your home is. Say, if a hog
2 farm, a chicken farm, a sheep farm, and a cattle farm
3 all decided to build a big plant right outside the city
4 limits and surround the city, one is built on each side,
5 the money proposed for schools, taxes, and the roads and
6 the community is very tempting, but in order to possibly
7 get some of the money they proposed to you, the town
8 would have to put up with these things being built. But
9 you didn't move into town to put up with these -- the
10 sights, the sounds, the smell of agriculture. Let's say
11 that they run 24 hours, six days a week. Semis coming
12 and going, making noise, livestock making noise, workmen
13 hollering at each other to hear because they can't hear
14 for the noise of the fans, the generators, and engines
15 going all day and all night. You sweat -- smell wafts
16 of manure when you are out working and lounging in your
17 backyard. You smell manure when you eat your meal. You
18 hear different noises while you're trying to sleep. If
19 you live near the roads they used, your pets and
20 children aren't safe to be near or ride their bikes near
21 the dangerous high traffic. The constant noise and
22 smell gives you a headache. Over time, you don't even
23 remember what your food tasted or smelled like. Maybe
24 you decide you want to move, but you can't because you

1 find out that your property's not as desirable as it was
2 before these plants moved in your area. So, now you
3 can't afford to move.

4 Doesn't the thought of this scenario ever
5 happening bring a variety of emotions to your mind?
6 Wouldn't you be thinking, "Well, my family was here
7 first. We've been here several years. I know that
8 these people owned this property, and they can build
9 what they want, but now they have affected a property
10 that I've been improving for years and now isn't worth
11 as much."

12 We have neighbors we like and we shouldn't
13 have to deal with the sights, sounds, and smells from
14 something we don't want. How do you feel that you don't
15 get to vote now and say no? You have to hope and pray
16 your town board thinks more of their residents than it
17 does the pie in the sky with the livestock corporations
18 that are operating the town. What happens to caring
19 about each other, finding alternatives of things, living
20 within your means?

21 No one likes listening to a slow dripping
22 faucet, a clothes dryer running all night, the white
23 noise of a television that doesn't have any reception, a
24 neighbor playing the same song in the backyard every

1 night, or a loose piece of metal on your neighbor's
2 house banging in the wind every night. But remember,
3 you can get used to it. Your brain will just turn it
4 off. You will learn to sleep through it. Why have we
5 become so greedy and care for ourselves? We will all
6 have a lot to answer for when we reach our Lord God.
7 We -- we reap what we sow later than we sow and more
8 than we sow.

9 It makes me sad to think the children and
10 grandchildren coming out behind us will not have the
11 privilege of seeing a sunrise or sunset in our area
12 without a wind turbine, the thoughts of wildlife leaving
13 the area if they aren't killed first, the possible
14 health issues that might occur for different residents.
15 When you see a beautiful portrait photograph real estate
16 brochure or vacation spot, they don't have wind turbines
17 in them. No one ever tells their realtor, "Hey, please
18 find me a home in the middle of a turbine farm. I want
19 to go on vacation next year and camp out and picnic by a
20 wind turbine.

21 To be fair, if you want and like turbines, you
22 should have to buy or build a home out and along them,
23 live in a farm area where the wind turbines are.
24 Therefore, you can experience the noise, infrasound, and

1 sight like you want the rest of us that oppose them.
2 The owners of these energy projects should be an example
3 of how great it is to live out there, and they do it by
4 building homes and communities for their employees to
5 surround their homes and families with wind turbines and
6 green energy machines.

7 Can't we be the country -- the county that
8 shows that this is the example to others, you can keep
9 your rural county areas as they should be. We are not
10 bullied, threatened, or bribed. We care about the -- we
11 care about and protect our rural residents and the
12 wildlife. We don't want them to move out. We hope that
13 others will move into the area because they don't want
14 to live where turbines and solar panels are being built,
15 so they move to Coles County.

16 This is some of the best soil and farm ground
17 in the Midwest. It is the right thing to do. We have
18 to take care of each other and the land and the
19 wildlife. We have to remember and think of others
20 instead of just ourselves and our greed, otherwise what
21 kind of people are we?

22 That's all I have to say.

23 MR. KAINS: Thank you, Ms. Winslow. Thank you
24 for your testimony.

1 Questions for Ms. Winslow from members of the
2 Planning and Development Committee?

3 Chairman?

4 EXAMINATION

5 BY MR. WATTS:

6 Q. Thank you for your testimony, Ms. Winslow. I
7 didn't hear anything about air pressure affecting bats.
8 Do you have the name of the study that that was
9 referencing?

10 (Document tendered.)

11 A. There's a screenshot. It says at the bottom,
12 I believe.

13 Q. Okay. I'll get that from you later so I can
14 look at it.

15 A. Okay, sure.

16 Q. And then also, could we give me -- who was the
17 author of the letter from EIU regarding the Brainard
18 Farm?

19 A. The farm manager was Cory Kauffman.

20 Q. And that's who wrote the letter, Cory
21 Kauffman?

22 A. Yes.

23 MR. WATTS: Okay, thank you.

24 MR. KAINS: And can you spell "Cory" and

1 "Kauffman" for the record.

2 MS. WINSLOW: C-o-r-y, K-a-u-f-f-m-a-n.

3 MR. KAINS: Very good, thank you.

4 Any other questions from members of the
5 committee for Ms. Winslow?

6 County Board members?

7 Members of the units of local government,
8 including school districts?

9 Cross-examination, counsel?

10 MS. LODE: No. Thank you for your testimony.

11 MR. KAINS: Thank you, Ms. Lode.

12 All right, members of the public who are in
13 support of the application or neutral on the
14 application? Ms. Callaway?

15 MS. CALLAWAY: I just have a quick question.
16 Do I need to redo my name and all that?

17 MR. KAINS: No, just ask your question. We
18 know who you are now.

19 MS. CALLAWAY: Okay. All right.

20 EXAMINATION

21 BY MS. CALLAWAY:

22 Q. I was just wondering, I -- first of all, like
23 I've stated, I've learned a lot from this whole hearing
24 and everything. Just wondering, Ms. Winslow, you

1 mentioned ground warming and drying out the soil. Was
2 that a study or where was your information on that?
3 Just curious.

4 A. One of the informations was from a Marilyn --
5 I'm not certain if I'm saying this right -- Vos Savant.
6 The last name is V-o-s, S-a-v-a-n-t. She used to write
7 articles and we clipped this one a few years ago. She
8 is supposed to be close to genius in expertise.

9 MR. KAINS: And that's a newspaper article
10 that you have?

11 MS. WINSLOW: Clipped it from -- she used to
12 write articles and they would publish them.

13 MR. KAINS: Okay, very good.

14 BY MS. CALLAWAY:

15 Q. So, it's a newspaper article --

16 A. Yes.

17 Q. -- is that what you're saying?

18 A. Yes, they used to publish her articles in the
19 paper.

20 Q. Okay, so it was a newspaper article. So --
21 and she is considered an expert why? Just asking.

22 A. She's supposed to be a genius in all kinds
23 of -- you know, she's smart enough she knows a vast
24 amount of things.

1 Q. Now, her accreditations were what?

2 A. It doesn't say.

3 Q. It doesn't say, okay. Did the article say
4 anything about -- well, wait a minute. I'm trying to
5 figure out how to -- okay. You had mentioned ground
6 warming, let's cover that, first.

7 How is it ground warming -- a wind turbine,
8 how is it warming the ground?

9 A. I would assume she meant because of -- it
10 keeps spinning so it's heating up the ground and --

11 Q. Okay, if you don't --

12 A. And the -- the electrical and heat that a
13 turbine would give off.

14 Q. Okay, I heard you -- you used the word
15 "assuming," is that what the article said that...

16 A. She -- she said that it would warm the ground.

17 Q. She said it --

18 A. Amongst other things, she did.

19 Q. Okay, and I was just kind of wondering, you
20 said "drying," I know the wind obviously goes across, as
21 far as farming goes, it goes across the field and
22 obviously wind coverings, you have evaporation, and that
23 kind of thing, obviously, drying the field. And,
24 therefore, the wind is going to be blowing across the

1 field anyway, so how is that -- what's the
2 difference becoming -- just a second -- what's the
3 difference between the wind blowing across the farm
4 versus the wind turbine? I mean, it's all wind. I mean
5 the wind causes the turbines to go round, so either way
6 you have wind. Does that make sense?

7 MR. KAINS: If you know the answer. What's
8 the difference between wind blowing and wind coming off
9 of a turbine blade?

10 Q. Because the wind --

11 MR. KAINS: If you know.

12 Q. -- is blowing the wind turbine?

13 A. I -- I don't know, but I would assume when you
14 have just like in your home, if you start a fan up, it's
15 blowing and drying a lot more than it -- just a regular
16 breeze --

17 Q. That's not my question.

18 A. -- coming through the window. You've added
19 that fan now, so it's going to be drying the fields out
20 even more underneath of them and surrounding area.

21 Q. Okay. Oh, gosh, I don't know. I have -- I'm
22 trying to figure out how to ask this question without a
23 statement. I have two residences. And I understand
24 the -- because we actually bought a home and they built

1 something across from it where it used to be a field, so
2 I get it. But wouldn't you agree that that is, with all
3 the zoning laws and different things, wouldn't you agree
4 that, you know, that's just kind of what happens in --
5 in life? Sometimes you don't always -- what do I want
6 to say? Okay. Sometimes that'll -- okay, let me -- I'm
7 sorry -- sometimes, like, we might not always like the
8 way the zoning board does things that they do, but it
9 happens, wouldn't you agree about that?

10 A. I don't guess I understand your question.

11 Q. Okay. Okay. Let me -- let me say... Would
12 you agree that things change and people have a right to
13 build and do things on their property, no matter what it
14 is, whether it's a hog farm or a...

15 MR. KAINS: "Do people have a right to do what
16 they want to with their property?" is, I believe, the
17 question.

18 MS. CALLAWAY: Thank you.

19 MS. WINSLOW: Maybe legally.

20 MS. CALLAWAY: Okay.

21 MS. WINSLOW: But morally and as a neighbor, a
22 friend, would you really be a good neighbor or a friend
23 if you're affecting them negatively just because you
24 want something or you desire something or you... Do we

1 just live in a world that's all for ourselves and
2 doesn't matter what other people think or feel?

3 MS. CALLAWAY: You know what, I was just gonna
4 ask something else, but I think I'll leave it there.

5 MR. KAINS: Okay, thank you, Ms. Callaway.

6 MS. CALLAWAY: Thank you, Ms. Winslow.

7 MR. KAINS: Okay, very good.

8 Any other questions from folks in support of
9 the application or neutral on the application? Very
10 good.

11 Coles County Staff and Consultants, Mr. Lockhart?

12 MR. LOCKHART: No, sir.

13 MR. KAINS: Mr. Keyt?

14 MR. KEYT: I don't have -- I don't have any
15 questions, but I do think we need to clarify the record
16 about what has been referenced and whether it's being
17 requested to be placed into evidence. So, I think there
18 was a reference to a bat study and there was also a
19 reference to an article by a Ms. Vos Savant. I don't --
20 I don't know if she's requesting that those be submitted
21 into evidence or not. It's okay if they're not, I think
22 she read what the of substance of them was.

23 MR. KAINS: She -- she's testified to the
24 letter from the Eastern Illinois University Foundation,

1 so there's no reason to admit that. She read the sum
2 and substance of both of those letters from a
3 Mr. Kauffman with EIU Foundation, so that won't need to
4 come in.

5 With respect to a bat study, no, that's --
6 that's not going to come in. And the newspaper clipping
7 of somebody in Maryland is -- that's -- that's not going
8 to come in as evidence either.

9 MR. KEYT: Okay.

10 MR. KAINS: Okay, do you have any questions of
11 Ms. Winslow?

12 MR. KEYT: No, I don't have any questions for her.

13 MR. KAINS: Okay, very good.

14 All right, final questions come from members
15 of the committee. Very good, thank you.

16 Ms. Winslow, you may step down.

17 Let's take up the issue of the -- Rita Rogers'
18 evidence that she brought forward, the study.

19 Mr. Keyt, do you have it?

20 Have you seen it, Mr. Hess?

21 MR. HESS: We have, Your Honor -- yes, sir --
22 sorry --

23 MR. KAINS: Okay.

24 MR. HESS: -- Mr. Kains, yes, sir.

1 MR. KAINS: What's the name of it, again?

2 MR. KEYT: Oh, boy.

3 (Audience members laughing.)

4 MR. KAINS: Yeah, I'm gonna make you earn your
5 keep here, Mr. Keyt.

6 MR. KEYT: Yeah, it's "Impairment of the
7 Endothelium and Disorder of Microcirculation in Humans
8 and Animals Exposed to Infrasound Due to Irregular
9 Mechano-Transduction." Is it published from a German --
10 it's a looks like it's a German author, Ursula Maria
11 Bellut-Staeck, I think is how they pronounce that.

12 MR. KAINS: All right.

13 Mr. Hess, objection or no?

14 MR. HESS: Mr. Kains, no objection. I only
15 understood maybe a third of those words. But my
16 suggestion, if you would like to admit it --

17 MR. KAINS: I -- I do.

18 MR. HESS: -- we can admit it now and I'll
19 argue the merits of it.

20 MR. KAINS: I -- I do want to admit that and
21 we will -- Mr. Keyt, do you want that mark as Rogers
22 Exhibit --

23 MR. KEYT: I would suggest it be marked as
24 Rogers Exhibit A, and we do not have an objection.

1 MR. KAINS: Okay, Rogers Exhibit A is in
2 evidence, okay. And then...

3 MR. KEYT: I think Mr. Yoder had four
4 photographs, which I would suggest we mark as Yoder
5 Exhibit A -- Group Exhibit A.

6 MR. KAINS: Do we have a copy of those?

7 MR. KEYT: I gave my card to Mr. Yoder so he
8 could email them to me.

9 MR. KAINS: Okay.

10 MR. YODER: I've got the email sent.

11 MR. KEYT: Okay.

12 MR. KAINS: All right, please -- please do
13 that, and -- okay, great. Then, those will -- do you
14 have any objection to those?

15 MR. HESS: No objection.

16 MR. KAINS: Okay, those will come in as Yoder
17 Group Exhibit A, and they are in evidence and will be
18 considered by the committee and, ultimately, the full
19 County Board. All right, that takes care of that bit of
20 evidence.

21 And we will take up probably tomorrow night,
22 late, Applicant's exhibits.

23 MR. HESS: Okay.

24 MR. KAINS: So, have those ready to go. Do

1 you have copies of all of them?

2 MR. KEYT: Oh, yeah. Yes, sir.

3 MR. KAINS: Okay, marked and everything?

4 MR. KEYT: Yeah, I believe all the exhibits
5 and presentations have been...

6 MR. KAINS: Okay, good. All right.

7 Okay, folks, tomorrow night, we are going to
8 reconvene this hearing. We're gonna start at 6 o'clock
9 and we're gonna go till hopefully we get done with
10 everything but a vote. So, that means tomorrow evening,
11 we will hear more testimony from the public.

12 Mr. Clint Shaw, I think you probably are a
13 speedy center fielder, so you will lead off. And then,
14 Mr. Sherman, you'll hit second, and Mr. Cronkhite will
15 bat third. And if there's any other folks -- I know
16 you're neutral and, Mr. Borgman, you will -- you may be
17 the cleanup hitter, unless we have other folks come in
18 who want to testify.

19 So, I anticipate that we will have great deal
20 of testimony tomorrow night. Then, we will have public
21 comment and the closing statements.

22 All right, before we go, just real quick,
23 Mr. Lockhart, Mr. Keyt, do we have written comments that
24 need to be presented?

1 MR. LOCKHART: Yes, I believe I sent you a
2 link a month ago or so with everything in a Word
3 document there.

4 MR. KAINS: Have you -- have you gotten
5 anything since then?

6 MR. LOCKHART: I've added to that.

7 MR. KAINS: Okay.

8 MR. LOCKHART: So, it's an ongoing document.

9 MR. KAINS: Okay.

10 MR. LOCKHART: There are also several letters
11 in there as well.

12 MR. KAINS: Okay, very good. Very good,
13 thank you.

14 And, Mr. Keyt, for you, evidence from the
15 County?

16 MR. KEYT: The -- the only anticipated
17 evidence will be the report from the County's engineer.

18 MR. KAINS: Is that complete?

19 MR. KEYT: Substantively, yes. And then we'll
20 put that into evidence. We'll likely do that before
21 the -- before the deliberation and vote.

22 MR. KAINS: Okay. Will you be able to do that
23 before we start public comment?

24 MR. KEYT: Possibly. If public comment occurs

1 tomorrow, no, but if it occurs on the 11th, yes.

2 MR. KAINS: Okay. Well, I think we're gonna
3 try to do -- we're gonna try and get all of the
4 testimony done tomorrow night. We're gonna try to get
5 all the public comment and closing statements in so that
6 on June 11th, that's all that this committee -- not that
7 all -- that's a tremendous undertaking -- but that will
8 be the job of the committee on June 11.

9 So, we're gonna plan to start tomorrow night
10 at 6 o'clock and go until we, quoting a great American,
11 "till we get 'er done."

12 Yes, Mr. Sherman?

13 MR. SHERMAN: Just a question on the procedurals
14 of this.

15 MR. KAINS: Yes.

16 MR. SHERMAN: I'm assuming Mr. Hess will do
17 the closing comments for that side -- for that side, for
18 the favor side. Since we don't really have a counsel
19 for the opposition side, how does the opposition side do
20 a closing comment?

21 MR. KAINS: Anyone who has made a -- has given
22 testimony may make a closing statement.

23 MR. SHERMAN: So, it could be more than one
24 person?

1 MR. KAINS: It could be -- it could be more
2 than one person. Although, one thing that I might
3 suggest -- and this is just a suggestion -- is if you
4 have a spokesperson or spokespersons, it might -- it
5 might behoove you to have one or two people be able to
6 consolidate all thoughts into one closing statement or
7 two closing statements. But I've -- in the times I've
8 done these hearings, and this is probably my 14th or
9 15th hearing -- something like that -- if -- if there
10 are multiple closing statements, that's okay, too. But
11 we want the closing statement to be a summary of the
12 evidence. So, sum up everything and you all can put
13 your heads together on who or however many folks you
14 want to have, but it's folks who are actually giving
15 testimony will be able to give a closing statement.

16 That's a very good question, Mr. Sherman.

17 MR. SHERMAN: Thank you.

18 MR. KAINS: Thank you for you raising that.

19 Yeah, so counsel will have the opportunity for
20 a closing statement, then there will be closing
21 statements by others, and then counsel also will have
22 the opportunity for a rebuttal statement since the
23 burden of going forward, burden of proof, is on them.

24 Ms. Antoniolli?

1 MS. ANTONIOLLI: And just to clarify, in
2 accordance with the procedural rules, if there are more
3 than one closing statement that they should not be
4 repetitive of the same issues or arguments?

5 MR. KAINS: Yes.

6 MS. ANTONIOLLI: Okay.

7 MR. KAINS: Yes. Thank you. Yeah, because we
8 want -- we want to use these guys' time as best we can.

9 And thank you, ladies and gentlemen, for your
10 attention, so let's go.

11 MS. ANTONIOLLI: One more -- one more --

12 MR. KAINS: Oh, yes.

13 MS. ANTONIOLLI: -- thing, just for these
14 procedures. When the public -- if we get to the
15 tomorrow night where it's late, will the public comments
16 that have been entered in writing just be entered
17 substantively and not read -- read into the record?

18 MR. KAINS: Well, that's -- that's going to
19 depend on how many there are and, you know, I may
20 summarize them --

21 MS. ANTONIOLLI: Okay.

22 MR. KAINS: -- rather than read an entire
23 letter, I may summarize it.

24 MS. ANTONIOLLI: Okay.

1 MR. KAINS: And then, I will -- I'll be
2 working on that during the day tomorrow.

3 MS. ANTONIOLLI: Thank you.

4 MR. KAINS: Okay, thank you.

5 Anything further from you guys?

6 MR. KEYT: No, sir.

7 MR. KAINS: Okay, all right. The Planning and
8 Development Committee of the Coles County Board is in
9 recess until tomorrow evening at 6:00 p.m. -- that's
10 tomorrow, May 20th, 2025, in this very courtroom, on
11 Jackson Street in Charleston. Thank you. See you
12 tomorrow at 6:00.

13 (End of hearing.)
